Perlick, 1995-08-17 Since the advent of the women's movement women have made unprecedented gains in almost every field from politics to the professions Paradoxically doctors and mental health professionals have also seen a staggering increase in the numbers of young women suffering from an epidemic of depression eating disorders and other physical and psychological problems In *The Cost of Competence* authors Brett Silverstein and Deborah Perlick argue that rather than simply labeling individual women as say anorexic or depressed it is time to look harder at the widespread prejudices within our society and child rearing practices that lead thousands of young women to equate thinness with competence and success and femininity with failure They argue that continuing to treat depression anxiety anorexia and bulimia as separate disorders in young women can in many cases be a misguided approach since they are really part of a single syndrome Furthermore their fascinating research into the lives of forty prominent women from Elizabeth I to Eleanor Roosevelt show that these symptoms have been disrupting the lives of bright ambitious women not for decades but for centuries Drawing on all the latest findings

rare historical research cross cultural comparisons and their own study of over 2 000 contemporary women attending high schools and colleges the authors present powerful new evidence to support the existence of a syndrome they call anxious somatic depression Their investigation shows that the first symptoms usually surface in adolescence most often in young women who aspire to excel academically and professionally Many of the affected women grew up feeling that their parents valued sons over daughters They identified intellectually with their successful fathers not with their traditional homemaker mothers Disordered eating is one way of rejecting the feminine bodies they perceive as barriers to achievement and recognition Silverstein and Perlick uncover medical descriptions matching their diagnosis in Hippocratic texts from the fourth century B C in anthropological studies of Africa Asia and Latin America and in case studies of many noted psychologists and psychiatrists including the hysteric patients Freud used to develop his theories on psychoanalysis They have also discovered that statistics on disordered eating depression and a host of other symptoms soared in eras in which women s opportunities grew particularly the 1920s when record numbers of women entered college and the workforce the boyish silhouette of the flapper became the feminine ideal and anorexia became epidemic and again from the 1970s to the present day The authors show that identifying this devastating syndrome is a first step toward its prevention and cure The Cost of Competence presents an urgent message to parents educators policymakers and the medical community on the crucial importance of providing young women with equal opportunity and equal respect
