The Environment United States. Congress. House. Committee on Ways and Means,1990 *Environmental Skill* Mark Coeckelbergh,2015-02-20 Today it is widely recognized that we face urgent and serious environmental problems and we know much about them yet we do very little What explains this lack of motivation and change Why is it so hard to change our lives This book addresses this question by means of a philosophical inquiry into the conditions of possibility for environmental change It discusses how we can become more motivated to do environmental good and what kind of knowledge we need for this and explores the relations between motivation knowledge and modernity After reviewing a broad range of possible philosophical and psychological responses to environmental apathy and inertia the author argues for moving away from a modern focus on either detached reason and control Stoicism and Enlightenment reason or the natural the sentiments and the authentic Romanticism both of which make possible disengaging and alienating modes of relating to our environment Instead he develops the notion of environmental skill a concept that bridges the gap between knowledge and action re interprets environmental virtue and suggests an environmental ethics centered on experience know how and skillful engagement with our environment The author then explores the implications of this ethics for our lives it changes the way we think about and deal with health food animals energy climate change politics and technology **Environmental Labelling**

Great Britain. Parliament. House of Commons. Environmental Audit Committee,2009 In this report HC 243 session 2008 09 ISBN 9780215529220 the Environmental Audit Committee calls for a sector based universal labelling scheme comparable to those emerging for food products The Committee says the Government should be prepared to legislate for such a scheme if necessary The Committee found greenwash the use of insubstantial or meaningless claims to promote a product to be a growing problem and that the Government has a role in policing green labels Commenting on the report Colin Challen MP Chairman of the Environmental Information Sub Committee said The Government has to act to deal with the problem of greenwash Clear labels are needed to help consumers make informed choices but for consumers to have confidence in them environmental labels must be backed up by independent monitoring that is fully verified Further that The proliferation of labels means we urgently need a universal scheme to help consumers discriminate between products on the basis of environmental factors A robust labelling regime would also change the way many businesses behave and help drive up environmental standards across whole sectors of the economy The Committee calls for more resources to be put into environmental labelling including efforts to raise public awareness It also wants more information to be made available on the standards and processes that underpin any label with the Government setting clear standards and guidelines on the content and presentation of such information In addition the Committee emphasises that the Government should encourage carbon labelling on all products as part of a universal sector based environmental labelling scheme **Total Sustainability in the Built Environment** Alison Cotgrave,Mike Riley,2012-12-06 The first textbook in sustainable construction bringing
