Trees It contains 125 chapters written by nearly 400 well known authors from about 40 countries *Step Wise Protocols for Somatic Embryogenesis of Important Woody Plants* Shri Mohan Jain, Pramod Gupta, 2018-05-30 World population is increasing at an alarming rate and this has resulted in increasing tremendously the demand for tree products such as wood for construction materials fuel and paper fruits oils and medicines etc This has put immense pressure on the world's supplies of trees and raw material to industry and will continue to do so as long as human population continues to grow Also the quality of human diet especially nutritional components is adversely affected due to limited genetic improvement of most of fruit trees Thus there is an immediate need to increase productivity of trees Improvement has been made through conventional breeding methods however conventional breeding is very slow due to long life cycle of trees A basic strategy in tree improvement is to capture genetic gain through clonal propagation Clonal propagation via organogenesis is being used for the production of selected elite individual trees However the methods are labour intensive costly and produce low volumes Genetic gain can now be captured through somatic embryogenesis Formation of embryos from somatic cells by a process resembling zygotic embryogenesis is one of the most important features of plants In 1958 Reinert in Germany and Steward in USA independently reported somatic embryogenesis in carrot cultures Since then tremendous progress in somatic embryogenesis of woody and non woody plants has taken place It offers a potentially large scale propagation system for superior clones The European Garden Flora Flowering Plants James Cullen, Sabina G. Knees, H. Suzanne Cubey, J. M. H.  Erosion in Plants** M.R. Ahuja, S. Mohan Jain, 2015-12-16 Genetic erosion is the loss of genetic diversity within a species It
 can happen very quickly due to catastrophic events or changes in land use leading to habitat loss But it can also occur more
 gradually and remain unnoticed for a long time One of the main causes of genetic erosion is the replacement of local varieties
 by modern varieties Other causes include environmental degradation urbanization and land clearing through deforestation
 and brush fires In order to conserve biodiversity in plants it is important to targets three independent levels that include
 ecosystems species and genes Genetic diversity is important to a species fitness long term viability and ability to adapt to
 changing environmental conditions Chapters in this book are written by leading geneticists molecular biologists and other
 specialists on relevant topics on genetic erosion and conservation genetic diversity in plants This divisible set of two volumes

Manufacturing Otherness Sergio Botta, 2014-01-14 The discovery of the New World offered European civilisation the chance to generate a process of circulation of its own cultural values the spiritual conquest that has no comparable precedents The missionary orders played an important role during this Westernisation of the world not only as key players in the spread of Christian values but also as mediators between different worlds Indeed missionary practices imposed the dominating culture s values and institutions on the vanquished peoples At the same time they also promoted the circulation of new knowledge and the negotiation between different cultures during the age of a global integration of space This book looks at the vast field of study concerning the history of missions from a specific viewpoint Firstly it focuses on local processes singling out specific case studies to be used for a general reflection On the other hand it refocuses the attention on the Indigenous cultures which the missionaries helped to bring to light in the field of Western history showing how they succeeded in entering the areas of negotiation created by missionaries and in producing their own cultural subjectivity

The Deformation Susanna Berger, 2025-07-29 A fascinating account of the use and meaning of visual and spatial distortions in seventeenth century art and architecture During the Catholic Reformation patrons artists architects and viewers especially in Rome were strongly drawn to visual and spatial distortions or deformations works of art and architecture that were designed to be visually incomprehensible at least initially From Borromini s San Carlo alle Quattro Fontane in Rome to the attention grabbing prospettiva in the city s Palazzo Spada and the anamorphoses that define the corridors and walls of Minim and Jesuit buildings The Deformation explores what this intriguing phenomenon reveals about contemporary religious belief optics and the natural sciences as well as wider questions about attention and discernment Failing to conform to an established ideal deformations required a reformation to achieve that ideal Anamorphic deformations for example could only be reformed into clarity when viewed from a particular angle or through a special mirror Susanna Berger examines how deformations were experienced by beholders and how they were embraced or opposed by critics The book shows how deformations and related works whether altar tabernacles ephemeral religious architecture

churches monumental sundials colonnades with accelerated perspective illusionistic frescoes turned ivories or painted anamorphoses focused observers attention on theological mysteries and the social power and sophistication of patrons The book s rich illustrations include two gatefolds and some anamorphic images that can be seen without distortion by using an included reflective insert as a mirror Looking at writings as well as visual works in multiple artistic media not typically considered in relation to each other The Deformation offers a new interpretation of deformation that highlights the delay between perception and discernment
