Passive And Active Environmental Controls Informing The Schematic Designing Of Buildings:

Passive and Active Environmental Controls Dean Heerwagen, 2004 Written for architects this title addresses how to design and construct buildings to satisfy occupants physical and physiological needs It serves as an introduction to the subject of environmental controls and presents information for schematic design of buildings It demonstrates how each system is integrated with other building systems *The Elements of Architecture* Scott Drake, 2014-02-04 The Elements of Architecture is a clear and well structured introduction to sustainable architecture which concentrates on general principles to make an accessible and comprehensive primer for undergraduate students The author takes a fresh and logical approach focusing on the way aspects of the built environment are experienced by the occupants and how that experience is interpreted in architectural design He works through basic elements and senses sun heat light sound air water and fire to explain and frame effective environmental architectural design not only arguing that the buildings we inhabit should be viewed as extensions of our bodies that interact with and protect us from these elements but also using this analogy to explain complex ideas in an accessible manner Developing Disaster Resilient Housing in Vietnam: Challenges and Solutions Tuan Anh Tran, 2015-12-21 This book provides a comprehensive understanding on disaster resilient housing within the Vietnam context particularly and the developing world generally The book has identified the root causes of housing vulnerability restrictions to safe housing development concepts of disaster resilient housing key issues factors implementers and building designers need to consider and ways of achieving resilient housing outcomes in actual design projects The design and development of disaster resilient housing has been framed into three main themes i community consultation ii the role of built environment professionals and iii design responses for resilience To achieve these themes there is a variety of contextual and intervening conditions that need to be addressed and met to provide an enabling environment for promoting disaster resilient housing These three themes are among the most arguable issues in recent debates and discussions academically and practically regarding disaster risk reduction and safe housing development In addition this book also provides the evidence based design framework for disaster resilient housing upon which design ideas and solutions for safe and resilient housing can be generated and shaped **The Dialectics of Urban and Architectural Boundaries in the Middle East and the Mediterranean** Suzan Girginkaya Akdağ, Mine Dinçer, Meltem Vatan, Ümran Topçu, İrem Maro Kırış, 2021-06-01 This edited volume informs readers about changing norms and meanings of borders and underlines recent scenarios that shape these borders It focuses mainly on the Mediterranean and Middle East regions through the following questions What are the social cultural philosophical political economic and aesthetic reasons for spatial segregation within contemporary territories and cities In the world of globalization and networks what are the new limitations of space What are the alienating differences between interior and exterior private and public urban and rural local and global and real and virtual Are spatial definitions and divisions more likely to be weakened if not totally erased by effects of globalization and

mobility similar to the dissolution of borders between countries Or are local practices and measures likely to become more apparent with emerging trends such as sustainability and identity Authored by international scholars all chapters are arranged under four main parts Urban and Rural Global and Local Physical and Sensual Real and Virtual Hence different concepts and definitions of borders along with varying methods and tools for questioning their essence in architectural and urban spaces will be introduced For example in the rural and urban context environments settlements housing landscape transformation conservation and development in the global and local context styles identity universal design sustainability globalization and networks mobility and migration in the physical and sensual context design studies and methodologies environmental psychology aesthetic reasoning sense of place and well being and in the real and virtual context realities tools and communities are the main themes of the chapters This book will be an essential source for professionals scholars and students of architecture and urban design with a view to understanding multidisciplinary perspectives in designing borders as well as the dialectical relationship between borders and space
