**Glaciations in North and South America from the Miocene to the Last Glacial Maximum** Nat Rutter, Andrea Coronato, Karin Helmens, Jorge Rabassa, Marcelo Zárate, 2012-06-30 Improved dating methods have increased our ability to more precisely determine the timing and durations of glaciations Utilizing glacial and loess deposits we have compared glaciations that occurred in North and South America in order to determine if events are synchronous or not to explore forcing mechanisms and to compare glaciations with cold periods of the Marine Oxygen Isotope stages and the loess paleosol records of China

Stratigraphic sections containing a variety of glacial deposits some with interbedded volcanics as well as loess deposits were used in reconstructing the glacial history The Late Pleistocene Brunhes Chron Last Glacial Maximum is recognized in mountain and continental areas of North America but only in the mountains of South America Commonly our comparisons indicate roughly synchronous glaciations on the two continents whereas other glaciations are more elusive and difficult to compare Although our comparisons are at low resolutions the results suggest that Milankovitch forcing is most likely the dominant trigger for hemispheric glaciation modified by local factors

**Archaeology of Piedra Museo Locality** Laura Miotti, Monica Salemme, Darío Herms, 2022-02-04 This book highlights the knowledge about landscapes and characteristics of the earliest hunter gatherer lifeway in Southern Patagonia It presents an analysis of the archaeological investigations carried out during three decades by an interdisciplinary team that involved archaeologists anthropologists paleontologists geologists and specialists in pollen and diatoms The database yielded was recovered from systematic survey and excavations from the Pleistocene and Holocene stratigraphic layers of the rockshelter known as AEP 1 Piedra Museo Locality situated in the central plateau of Santa Cruz Province Argentina Piedra Museo is a unique place in the world of high academic interest with some of the earliest archaeological remains in the Americas Researchers defined two strata and several Stratigraphic units in the site based on the sedimentological and pedological characteristics The depositional zones contain archaeological remains that are interpreted as hunting events corresponding to two main different occasions in the human colonization of the region and a third human occupation during the Middle Holocene Last one occurred then of the massive rockshelter roof collapse The faunal remains led to a new approach to the palaeoenvironmental evolution of this enclosed basin This volume describes the management of lithic raw materials and social networks from first human occupation of the Patagonian region to territorial consolidation of hunter gatherer societies

**The Patagonian Icefields** Gino Casassa, Francisco V. Sepúlveda, Rolf M. Sinclair, 2012-12-06 The majesty of the icefields is beyond description He who has been fortunate to be there once remains bound forever To a theoretical physicist working on black holes the icefields produce a familiar vertigo the instinctive certainty of being confronted with something so simple and beautifully extreme that it must be of importance The meeting whose proceedings are contained in this volume was conducted onboard of a vessel that went to the icefields and the participants could literally set foot on them It was expected that for those who had not been there before this would constitute a ritual of initiation And so it did For this reason we like to refer to the meeting as an expedition because although it did not have the hardship it had the spirit After this foundational expedition there have been two others this time both with spirit and hardship one from Chile and one from Argentina At the moment of this writing a fourth full fledged airborne expedition to the icefields is about to depart from Valdivia Many of the people of many nations who were on board of the Aquiles will take part in it We look forward to its results and to an ongoing exciting scientific adventure Claudio Teitelboim Director Centro de Estudios Científicos Valdivia September 2001

As such, the book will appeal to all researchers and professionals specialized in lizard ecology and evolution. *Global Change and Mountain Regions* Uli M. Huber, Harald K.M. Bugmann, Mel A. Reasoner, 2006-03-09 Mountain regions occupy about a quarter of the global terrestrial land surface and provide goods and services to more than half the humanity. Global environmental change threatens the integrity of these systems and their ability to provide the goods and services upon which humanity has come to depend. This book gives an overview of the state of research in fields pertaining to the detection, understanding, and prediction of global change impacts in mountain regions. More than 60 contributions from paleoclimatology, cryospheric research, hydrology, ecology, and development studies are compiled in this volume, each with an outlook on future research directions. *Past Climate Variability in South America and Surrounding Regions* Francoise Vimeux, Florence Sylvestre, Myriam Khodri, 2009-08-04 South America is a unique place where a number of past climate archives are available from tropical to high latitude regions. It thus offers a unique opportunity to explore past climate variability along a latitudinal transect from the Equator to Polar regions and to study climate teleconnections. Most climate records from tropical and subtropical South America for the past 20 000 years have been interpreted as local responses to shifts in the mean position and intensity of the InterTropical Convergence Zone due to tropical and extratropical forcings or to changes in the South American Summer Monsoon. Further South, the role of the Southern Hemisphere westerly winds on global climate has been highly investigated with both paleodata and coupled climate models. However, the regional response over South America during the last 20 000 years is much more variable from place to place than previously thought. The factors that govern the spatial patterns of variability on millennial scale resolution are still to be understood. The question of past natural rates and ranges of climate conditions over South America is therefore of special relevance in this context since today millions of people live under climates where any changes in monsoon rainfall can lead to catastrophic consequences. **Conservation in Chilean Patagonia** Juan Carlos Castilla, Juan J. Armesto, Zamudio, María José Martínez-Harms, David Tecklin, 2024-01-03 Chilean Patagonia, located at the southwestern tip of South America, is one of the last regions on earth where highly intact environments predominate. With a coastline that extends along some 100 000 km of fjords, channels, and islands, it has one of the world's most extensive marine-terrestrial interfaces. Local place-based and Indigenous cultures and management practices are a vital presence across the region, while the long and rich history of conservation efforts have resulted in officially protected areas covering over 50% of the land and 41% of the coastal marine area. However, Chilean Patagonia is increasingly facing anthropogenic pressures associated with increased infrastructure and access, salmon aquaculture, extractive industries, and the spread of invasive exotic species. Despite widespread recognition that Chilean Patagonia represents a unique global reservoir of socio-natural heritage, to date there has been no region-wide assessment of the

scientific evidence of the conservation status of its ecosystems or the priorities for their effective conservation Conservation in Chilean Patagonia Assessing the state of knowledge opportunities and challenges is the first book to gather and synthesize the available scientific and socio environmental information related to Patagonian conservation It presents the collaborative work of 68 researchers and local experts representing a range of specialties and perspectives including biology ecology socio ecology fisheries aquaculture anthropology economics geography tourism cryosphere oceanography climate and global change The book s 18 chapters focus on the status of key ecosystems and conservation tools and provide recommendations toward the construction of a renewed inclusive and integrated conservation agenda for the Chilean Patagonian region It provides an essential primer for anyone interested in the future of this ecologically vital region as well as lessons on interdisciplinary collaboration and integrated analysis of conservation issues useful for conservation practitioners and scholars This is an open access book This book is a translation of an original Spanish edition The translation was done with the help of artificial intelligence machine translation by the service DeepL com A subsequent human revision was done primarily in terms of content so that the book will read stylistically differently from a conventional translation **Bulletin of Glacier Research** ,1992
