**Productivity and Performance in the Paper Industry** Gary Bryan Magee,1997-03-27 This pioneering 1997 study examines the economic development of the British paper industry between 1860 and 1914 an era in which it is often claimed that the origins of Britain s relative economic decline are first witnessed For paper making this was also a period in which an array of important new forces including inter alia the development of new raw materials and the move to ever larger scales of production came

on the scene Gary Bryan Magee looks at the effect of these changes and assesses how effectively the industry coped with the new pressures drawing upon an extensive range of quantitative and archival sources from Britain America and other countries Along the way Dr Magee addresses issues central to the understanding of industrial competitiveness such as technological change entrepreneurship productivity trade policy and industrial relations Knowledge Generation and Protection Jorge Mario Martínez-Piva, 2009-12-03 This book is the English version of the text published by the Economic Commission for Latin America and the Caribbean in April 2008 and entitled Generación y protección del conocimiento propiedad intelectual innovación y desarrollo económico Since then the year that has passed has been fraught with uncertainty but has also brought signs of hope Indeed the past year was marked by the outbreak of the deepest and most pervasive financial and economic crisis since the Great Depression of 1929 a crisis generated in the United States but whose negative repercussions have spread at a phenomenal rate throughout the planet The impact of this crisis on the peoples of Latin America and the Caribbean will undermine the region's prospects for economic growth employment and poverty alleviation This was the year in which United States citizens elected Barack Obama as their President a clear sign of new hope This hope was tangible at the Fifth Summit of the Americas held in Port of Spain which marked a turning point in the relations between the countries that make up this hemisphere The open posture of the United States and that country's readiness to listen rather than to impose any particular position and its willingness to engage in dialogue on an equal footing were positive signs Moreover it was generally admitted that there is not just one model for advancing successfully toward development **The Oxford Handbook of Local Competitiveness** David B. Audretsch, Albert N. Link, Mary Lindenstein Walshok, 2015-08-03 The local levels of economies have felt the impact of technological change and globalization These forces have triggered the need to understand the dynamic mechanisms that enable locales to respond to such changes For example the downsizing of traditional employers because of a major loss in market share due to new competitors acquisition by global firms or offshoring of production or services was traditionally thought to be beyond the scope of powers of local policy makers thinkers and business leaders In the world of practice those concerned about the economic performance of place city region or state are increasingly focused on how to adapt to these trends and leverage their existing resources to respond to these global challenges as a positive opportunity The Oxford Handbook of Local Competitiveness brings together some of the leading minds in the fields of business economics and the social sciences to identify articulate and analyze what influences and shapes local competitiveness and what places can do to enhance their economic performance The contributors to the Handbook provide a body of systematic analyses suggesting that the local context is a critical element of the forces that shape competitiveness The challenges to generate and sustain economic performance vary across places and the factors and conditions that either enhance or impede competitiveness also are place specific Finally the characteristics and nature of what constitutes success also vary across places This Handbook is essential reading material for

academics in the fields of economics and public policy as well as business leaders who hope to gain a more in depth understanding of their field Informative and intellectually rigorous The Oxford Handbook of Local Competitiveness is the definitive volume of scholarly analysis regarding the relationship between place and economic competition **U.S. Industry in 2000** National Research Council,Board on Science, Technology, and Economic Policy,1999-05-11 U S industry faced a gloomy outlook in the late 1980s Then industrial performance improved dramatically through the 1990s and appears pervasively brighter today A look at any group of industries however reveals important differences in the factors behind the resurgence in industry structure and strategy research performance and location of activities as well as similarities in the national policy environment impact of information technology and other factors U S Industry in 2000 examines eleven key manufacturing and service industries and explores how they arrived at the present and what they face in the future It assesses changing practices in research and innovation technology adoption and international operations Industry analyses shed light on how science and technology are applied in the marketplace how workers fare as jobs require greater knowledge and how U S firms responded to their chief competitors in Europe and Asia The book will be important to a wide range of readers with a stake in U S industrial performance corporate executives investors labor representatives faculty and students in business and economics and public policymakers **The Government Role in Civilian Technology** Institute of Medicine,National Academy of Engineering,National Academy of Sciences,Committee on Science, Engineering, and Public Policy,Panel on the Government Role in Civilian Technology,1992-02-01 As U S industry faces worldwide challenges policymakers are asking questions about the role of the federal government not only in promoting basic research but also in ushering new innovations to the marketplace This book offers an expert consensus on how government and industry together can respond to the new realities of a global marketplace The volume offers firm conclusions about policy and organizational changes with the greatest potential to improve our technological competitiveness and presents three alternative approaches for a new federal role The volume examines How federal involvement in technology development affects the nation s economic well being What we can learn from past federal efforts to stimulate civilian technology development in the United States and among our major industrial competitors How trends in productivity R D and other key areas have affected U S performance and how we compare to the world s rising industrial economies Offering guidance on one of the 1990s most important issues this volume will be indispensable to federal policymakers executives in industry and technology and researchers **Science, Technology and Industry Outlook 2000** OECD,2000-09-27 This study summarises key recent developments in science technology and innovation across the OECD area It covers trends provides an overview of policy developments and emphasises the roles played by science and technology in recent economic growth **Science Indicators, 1980** National Science Board (U.S.),1981 **The Technological Specialization of Advanced Countries** D. Archibugi,Mario Pianta,1992-09-30 Advanced countries have shown an increasing convergence in their economic

performance and technological intensity with a relative decline of the position of the United States and the emergence of the European and Japanese economies The Technological Specialization of Advanced Countries moves beyond aggregate patterns and examines the sectoral structure of technological activities the process of specialization and the impact on national performance Indicators of technology and of scientific activity are examined together with other economic and R D data providing a wealth of empirical evidence on the activities and areas of strength and weakness of individual countries The amount of disaggregated data provided and the assessment offered on the state of art in science and technology indicators make The Technological Specialization of Advanced Countries an important reference work A description of the fields of national effort is provided and a special study is devoted to the fields of greater innovative dynamism where patenting has grown most rapidly Over time countries have concentrated their technological efforts in the fields of their greater strength under the pressure of increasing international competition and the proprietary nature of know how Conversely in science there has generally been a decrease in the degree of specialization with countries entering new fields of research taking advantage of the open flow of scientific knowledge For science and technology policy the findings of The Technological Specialization of Advanced Countries suggest that national efforts should be combined with the growing international integration The aims of maintaining established areas of strength and of developing new specializations in emerging fields should be balanced and a more selective policy at the sectoral level is suggested
