*Low Threshold Organic Thin Film Laser Devices* Christian Karnutsch, 2007      **Low Threshold Organic Semiconductor Lasers** Yue Wang, 2013-10-01 This thesis focuses on two areas the development of miniature plastic lasers that can be powered by LEDs and the application of these lasers as highly sensitive sensors for vapours of nitroaromatic explosives e g TNT Polymer lasers are extremely compact visible lasers the research described in the thesis is groundbreaking driving forward the technology and physical understanding to allow these lasers to be routinely pumped by a single high power LED A notable advance in the work is the demonstration of nanoimprinted polymer lasers which exhibit the world s lowest pump threshold densities by two orders of magnitude The thesis also advances the application of these compact novel lasers as highly sensitive detectors of explosive vapours demonstrating that rapid detection can be achieved when microporous polymers are used This work also demonstrates a prototype CMOS based microsystem sensor for explosive vapours exploiting a new detection approach      *Low Power RF Circuit Design in Standard CMOS Technology* Unai Alvarado, Guillermo Bistué, Iñigo Adín, 2011-10-18 Low Power Consumption is one of the critical issues in the performance of small battery powered handheld devices Mobile terminals feature an ever increasing number of wireless communication alternatives including GPS Bluetooth GSM 3G WiFi or DVB H Considering that the total power available for each terminal is limited by the relatively slow increase in battery performance expected in the near future the need for efficient circuits is now critical This book presents the basic techniques available to design low power RF CMOS analogue circuits It gives circuit designers a complete guide of alternatives to optimize power consumption and explains the application of these rules in the most common RF building blocks LNA mixers and PLLs It is set out using practical examples and offers a unique perspective as it targets designers working within the standard CMOS process and all the limitations inherent in these technologies      *Neuroscientific Foundations of Anesthesiology* George A. Mashour, Ralph Lydic, 2011-10-05 Although the perioperative care of patients by anesthesiologists draws on diverse clinical skills the principles of anesthesiology and pain management are rooted in the neurosciences The Neuroscientific Foundations of Anesthesiology thoroughly examines the anesthetic modulation of the central peripheral and autonomic nervous systems and will help redefine anesthesiology as a fundamentally neuroscientific field The book is organized by sections with each focusing on a different part of the nervous system State of the art chapters written by thought leaders in anesthesiology and neuroscience provide a novel and invaluable resource      **Excitatory Amino Acids Their Role in Neuroendocrine Function** Darrell W. Brann, Virendra B. Mahesh, 1995-10-24 This publication focuses on the neuroendocrine functions of excitatory neurotransmitters in the brain known as the excitatory amino acid transmitters EAAs EAAs such as glutamate and aspartate regulate the release of pituitary hormones which in turn effect most of the physiological systems in the body This book gives detailed coverage of the role of EAAs in reproduction growth the stress axis seasonal breeding puberty learning and memory      **Enteric Nervous System**

Jackie D. Wood, 2011-08-01 Minute to minute behavior of the alimentary tract reflects the integrated functioning of the gut's musculature, secretory glands and blood lymphatic vasculature. Activity of the three effector systems to generate functionally effective patterns of behavior which are adaptive for differing digestive states is organized and coordinated by the enteric nervous system, i.e. the brain in the gut. The heuristic model for the enteric nervous system (ENS) is the same as for all integrative nervous systems whether in vertebrate or invertebrate animals. Like other integrative nervous systems such as the spinal cord and brain stem, the ENS functions with sensory neurons, interneurons and motor neurons. That the gut does not work without the ENS can be made as an absolute statement. This is apparent in its absence in terminal regions of the large intestine in Hirschsprung's disease in humans and animals where it is reflected by dysfunctional motility, failure of defecation and proximal fecal compaction within a proximal megacolon. Autoimmune ablation of the ENS in the lower esophageal sphincter underlies the pathophysiology of achalasia. Furthermore, neuropathic degeneration of ENS neurons in irritable bowel syndrome, other functional gastrointestinal disorders, intestinal pseudoobstruction, Chagas disease, paraneoplastic syndrome and enteric ganglionitis underlies the morbidity associated with these disorders. The impact of these clinical disorders on quality of life and cost of health care is a reminder of the importance of the ENS for a normally functioning gut. Moreover, our incomplete understanding of the pathobiology of these disorders highlights a need for research directed to expansion of current knowledge of the neurobiology of the ENS at all levels of organization from the cellular biology of individual neurons to the biophysics of integrated networks to whole organ behavior. Investigation of the normal and disordered ENS and its interactions with the central nervous system is a branch of neurogastroenterology. Neurogastroenterology is a scientific and clinical subspecialty of gastroenterology that deals with the neural mechanisms that influence function of the digestive tract and that underlie projection of conscious sensations to the gut.

Holtmann, N.J. Talley, 2003-09-30 This book the proceedings of Falk Symposium 130 on Gastrointestinal Inflammation and Disturbed Gut Function: The Challenge of New Concepts held in Freiburg, Germany on October 4-6, 2002. Part I of the Gastroenterology Week Freiburg 2002 reviews ground breaking work and will stimulate new research in the functional GI disorders from the bench to the bedside. Basic scientists, clinical researchers and clinicians interested in this field explore controversial and exciting areas of research and consider targets for future therapeutic interventions. **Chips 2020** Bernd Hoefflinger, 2011-12-15 The chips in present day cell phones already contain billions of sub 100 nanometer transistors. By 2020 however we will see systems on chips with trillions of 10 nanometer transistors. But this will be the end of the miniaturization because yet smaller transistors containing just a few control atoms are subject to statistical fluctuations and thus no longer useful. We also need to worry about a potential energy crisis because in less than five years from now with current chip technology the internet alone would consume the total global electrical power. This book presents a new sustainable roadmap towards ultra low energy femto Joule high performance electronics. The focus is on the energy efficiency of the various chip functions: sensing, processing and communication in a top down spirit involving new architectures such as silicon brains, ultra low voltage circuits, energy harvesting and 3D silicon technologies. Recognized world leaders from industry and from the research community share their views of this nanoelectronics future. They discuss among other things ubiquitous communication based on mobile companions, health and care supported by autonomous implants and by personal carebots, safe and efficient mobility assisted by co-pilots equipped with intelligent micro electromechanical systems and internet based education for a billion people from kindergarden to retirement. This book should help and interest all those who will have to make decisions associated with future electronics: students, graduates, educators and researchers as well as managers, investors and policy makers. *Introduction Towards Sustainable 2020 Nanoelectronics* From Microelectronics to Nanoelectronics, The Future of Eight Chip Technologies, Analog, Digital, Interfaces, Interconnects and Transceivers, Requirements and Markets for Nanoelectronics, ITRS: The International Technology Roadmap for Semiconductors, Nanolithography, Power Efficient Design, Challenges, Superprocessors and Supercomputers, Towards
