Congress. House. Committee on Science. Subcommittee on Technology,1998 **Proceedings** ,2005 A Subject Index to Current Literature Australian Public Affairs Information Service, Genetic Systems Programming Ajith Abraham,2008-07-21 Designing complex programs such as operating systems compilers filing systems data base systems etc is an old ever lasting research area Genetic programming is a relatively new promising and growing research area Among other uses it provides efficient tools to deal with hard problems by evolving creative and competitive solutions Systems Programming is generally strewn with such hard problems This book is devoted to reporting innovative and significant progress about the contribution of genetic programming in systems programming The contributions of this book clearly demonstrate that genetic programming is very effective in solving hard and yet open problems in systems programming Followed by an introductory chapter in the remaining contributed chapters the reader can easily learn about systems where genetic programming can be applied successfully These include but are not limited to information security systems compilers data mining systems stock market prediction systems robots and automatic programming *SIGKDD Explorations* ,2000 *Intrusion Detection* Deborah Frincke,2002 The first Workshop on Intrusion Detection and Prevention took place in November 2000 under the auspices of the 7th ACM Conference on Computer Security The selected papers here reflect the contrast of the old and new regarding the development in the field of IDS For instance papers involving profiling a tried and true strategy for identifying potential mistreatments are included as well as a discussion of the business model of security **Mobile Agents and Security** Giovanni Vigna,2003-05-20 New paradigms can popularize old technologies A new standalone paradigm the electronic desktop popularized the personal computer A new connected paradigm the web browser popularized the Internet Another new paradigm the mobile agent may further popularize the Internet by giving people greater access to it with less eort MobileAgentParadigm The mobile agent paradigm integrates a network of computers in a novel way designed to simplify the development of network applications To an

application developer the computers appear to form an electronic world of places occupied by agents Each agent or place in the electronic world has the authority of an individual or an organization in the physical world The authority can be established for example cryptographically A mobile agent can travel from one place to another subject to the destination place's approval The source and destination places can be in the same computer or in different computers In either case the agent initiates the trip by executing a go instruction which takes as an argument the name or address of the destination place The next instruction in the agent's program is executed in the destination place rather than in the source place Thus in a sense the mobile agent paradigm reduces networking to a program instruction A mobile agent can interact programmatically with the places it visits and if the other agents approve with the other agents it encounters in those places **Security**
