*National Reforms in European Gas* M. Arentsen, R. Kunneke, 2003-08-14 Focussing on the change and development of national gas markets in Europe this book provides an overview analysis and comparison of recent dynamics in several national gas markets at a time of very rapid change within this industry This overview provides a better understanding of current events and future evolution in the European gas business What can be expected at the European level given the recent trends and dynamics in national gas markets in Europe How did countries respond to the EU gas directive and why What are the important barriers to a harmonised European gas market from the perspective of national developments This book tackles these and related questions Written by experts across the field of energy policy and reform this publication will be an invaluable resource for social scientists studying the ongoing reform process in energy markets as well as industry analysts consultants policy makers and utility companies worldwide

Regulating Gas Liberalization Anton Ming-Zhi Gao, 2010-01-01 La 4e de couverture indique Along with aviation and telecommunications the gas supply chain has proved to be one of the paradigmatic factors in the great transformation in regulated industry law that has characterized recent decades The liberalization in the gas market has taken two primary legal forms i removal of entry barriers in competitive sectors and ii regulation of infrastructure sectors through unbundling economic separation of competitive and infrastructure sectors and open access requiring gas infrastructure owners operators to allow competitors to access their facilities on commercial terms comparable to those that would apply in a competitive market This book will focus on the latter legal form This is the first book to analyze in a comparative way the detailed development of the unbundling and open access regimes across three continents It is the author's contention that these two legal forms should be more widely implemented than they are at present In each of five substantial chapters on the United States Europe Japan South Korea and Taiwan the author first focuses on the proposed or current laws and industrial practices on service account functional legal and ownership unbundling and independent system operator and then on those of different open access regimes mainly including regulated and negotiated third party access insofar as they have been developed in each location Using empirical evidence from Europe the United States and Japan that a well formulated and comprehensive liberalization can bring about more advantages than disadvantages he shows how well designed unbundling and open access regimes may accomplish the following inject much needed competition into gas exploration exploitation import production and retailing reform and re regulate non competitive sectors such as transportation distribution and storage balance potential conflicts between energy security and competition and support interests such as environmental protection energy rights safety and consumer protection The author attends throughout to the contrasting market situations in countries that rely on importing natural gas by liquefied natural gas tankers LNG countries and countries with their natural gas mainly coming from production fields via direct pipelines PNG countries Identifying the key legal issues arising from the development of the various unbundling and open access regimes

discussed the book goes on to provide a detailed general legislative framework for gas liberalization that applies especially to LNG countries The author finds perhaps surprisingly that both LNG countries and PNG countries can in fact learn from each other This book will be a key reference for anyone interested in the legal issues of gas liberalization and will also provide the international energy community with keen insight into the unbundling and open access regimes in the United States Europe Japan South Korea and Taiwan Policymakers around the world will discover an excellent framework for launching or improving a gas liberalization scheme

Reshaping European Gas and Electricity Industries Dominique Finon,Atle Midttun,2004-12-02 A unique and thorough investigation of the shift towards Europe wide energy regulation markets and business strategies and the extent to which energy systems have become more liberalised over this period Reshaping of European Gas and Electricity Industries analyses the key issues facing the European energy industry from a regulatory market and business perspective Current challenges within the field are also reviewed including competitive and environmental issues Liberalization Delivers timely insights into the changes facing the European energy industry in the face of deregulation Competition A direct look at business and marketing strategies in response to the influx of competition from across the globe Environment Provides powerful insights into the way environmentally based legislation has now become a key driver of the energy industry in Europe

**International Handbook of Network Industries** Matthias Finger,R. W. K\_nneke,2011 To learn about how economic and institutional forces have shaped the network industries and policies towards them read the first part of the book To discover their impacts on particular industries read the second part And to find out what has happened in particular countries read the third part I think anyone interested in network industries should read all of it The book s structure allows for many interesting comparisons across countries and sectors Richard Green University of Birmingham UK This is a very useful and comprehensive guide to reforms in network industries in communications energy transport and water It is organized by generic topic sector and region Its authors are acknowledged experts I am confident that this Handbook will be a widely read and valuable resource for many years Martin Cave London School of Economics UK Quite an accomplishment this Handbook provides by far the most comprehensive overview of the role of the private sector and competition in infrastructure industries with thoughtful surveys of each of the major infrastructure sectors and of the key regions and countries Jos G mez Ib ez Harvard University US In recent decades all infrastructures have undergone significant restructuring This worldwide phenomenon is often labelled liberalization and although expectations were high with respect to lower prices greater efficiency and innovation the expected gains have not always been fully realized This extensive state of the art Handbook provides a comprehensive overview of the various experiences of liberalization across different sectors regions and disciplines The multidisciplinary approach focuses on the economic political and institutional aspects of liberalization as well as to a lesser extent on technological issues As such it constitutes a unique contribution as this broad overview is often lost in the sector specific country focused and purely disciplinary approaches prevalent in the

current literature Sectors explored include telecoms the Internet energy and transport whilst the truly global perspective incorporates unique case studies from an array of developed and developing countries including the US China India and the EU The International Handbook of Network Industries will become the definitive volume for academics researchers and students of economics political science and law interested in infrastructure regulation It will also prove a valuable guide to practitioners and policy makers involved in liberalization and competition **Held Captive by Gas** Joshua

Posaner,2019-08-22 Gas makes or breaks economies as shown by the effects of the 2009 Ukraine Russia gas supply crisis Joshua Posaner looks at four case study countries in Central and Eastern Europe He examines the interdependence between the domestic political structure of a gas import dependent country and the price it paid for imports up to 2014 using the level of reliance on the dominant supplier as an indicator The more dependent a country is on a single supplier the more it pays for its supplies The author aims to explain why capitals prioritize energy security and balance their import portfolios differently while taking a new angle on the European gas system He offers a timely investigation into an oft reported subject with Russia s perceived energy weapon and themes of energy dependence weighing heavily on European political discourse

**Energy Security and Natural Gas Markets in Europe** Tim Boersma,2015-08-27 Moving beyond most conventional thinking about energy security in Europe which revolves around stability of supplies and the reliability of suppliers this book presents the history of European policy making regarding energy resources including recent controversies about shale gas and fracking Using the United States as a benchmark the author tests the hypothesis that EU energy security is at risk primarily because of a lack of market integration and cooperation between member states This lack of integration still prohibits natural gas to flow freely throughout the continent which makes parts of Europe vulnerable in case of supply disruptions The book demonstrates that the EU gas market has been developing at different speeds leaving the Northwest of the continent reasonably well integrated with sufficient trade and liquidity and different supplies whereas other parts are less developed In these parts of Europe there is a structural lack of investments in infrastructure interconnectors reverse flow options and storage facilities Thus even though substantial progress has been made in parts of the EU single source dependency often prevails leaving the relevant member states vulnerable to market power abuse Detailed comparisons are made of the situations in the Netherlands and Poland and of energy policy in the USA The book dismantles some of the existing assumptions about the concept of energy security and touches upon the level of rhetoric that features in most energy security and policy debates in Europe

energy supply diversification Thus taking into account these most fundamental prerequisites for increased gas demand this volume addresses the more immediate question of how the conglomeration and organisation of European gas industries will be influenced by this latent demand potential The purpose of this book is to focus both on the analysis of evolutionary organisational processes within the gas industry and the pressures for change provoked by external forces such as interfuel competition environmental imperatives and new trends in European economic policies The potential for structural change in the organisation of the European gas industry is discussed as well as the political economic and commercial factors affecting its progress With the present uncertainty as to whether the gas industry will take advantage of the obvious market opportunities that are opening up this book takes a close look at the European gas industry at this time of change and analyses how this process may develop and the possible implications this will have on the gas industry
