way ecological concerns are articulated politically and culturally Moreover these changes are often viewed through a Western moralistic lens which at the same time applauds Asia's economic growth as the welcome revival of a floundering world economy and simultaneously condemns this growth as encouraging hyperconsumerism and a rupture with more natural ways of living This book presents an analysis of a range of practices and activities from across Asia that demonstrate that people in Asia are alert to ecological concerns that they are taking action to implement new styles of green living and that Asia offers interesting alternatives to narrow Anglo American models of sustainable living Subjects explored include eco tourism in the Philippines green co operatives in Korea the importance of tradition within Asian discourses of sustainability and much more

Architecture and Anthropology Adam Jasper, 2020-05-21 Both architecture and anthropology emerged as autonomous theoretical disciplines in the 18th century enlightenment Throughout the 19th century the fields shared a common icon the primitive hut and a common concern with both routine needs and ceremonial behaviours Both could lay strong claims to a special knowledge of the everyday And yet in the 20th century notwithstanding genre classics such as Bernard Rudofsky's *Architecture without Architects* or Paul Oliver's *Shelter* and various attempts to make architecture anthropocentric such as Corbusier's *Modulor* disciplinary exchanges between architecture and anthropology were often disappointingly slight This book attempts to locate the various points of departure that might be taken in a contemporary discussion between architecture and anthropology The results are radical post colonial theory is here counterpoised to 19th century theories of primitivism archaeology is set against dentistry fieldwork is juxtaposed against indigenous critique and climate science is applied to questions of shelter This publication will be of interest to both architects and anthropologists The chapters in this book were originally published within two special issues of *Architectural Theory Review*

The Architecture of Disability David Gissen, 2023-01-24 A radical critique of architecture that places disability at the heart of the built environment Disability critiques of architecture usually emphasize the need for modification and increased access but The Architecture of Disability calls for a radical reorientation of this perspective by situating experiences of impairment as a new foundation for the built environment With its provocative proposal for the construction of disability this book fundamentally reconsiders how we conceive of and experience disability in our world Stressing the connection between architectural form and the capacities of the human body David Gissen demonstrates how disability haunts the history and practice of architecture Examining various historic sites landscape designs and urban spaces he deconstructs the prevailing functionalist approach to accommodating disabled people in architecture and instead asserts that physical capacity is essential to the conception of all designed space By recontextualizing the history of architecture through the discourse of disability The Architecture of Disability presents a unique challenge to current modes of architectural practice theory and education Envisioning an architectural design that fully integrates disabled persons into its production it advocates for looking beyond traditional notions of accessibility and shows how certain incapacities can offer us the means to positively reimagine the roots of architecture
