

Geosciences Research for Gas Hydrates

Developing the science base for understanding the potential of gas hydrates as a resource

BES research will investigate fundamental scientific questions about methane hydrates: their formation and occurrence; their stability in natural or engineered systems; their role in geological/ ecological systems; and their role in the carbon cycle (+\$17,517K).

The program will also study hydrates via controlled *in situ* depressurization and physical, thermal, and chemical stimulation in the Arctic and the Gulf of Mexico. This research will be supported by theory and multi-scale modeling and simulation in areas such as the intermolecular forces that govern the structure and properties of gas hydrates.

Methane hydrates are naturally occurring combinations of methane and water that form at low temperatures and high pressure.
