

Earth Shelter

EFFICIENT BLENDING

Earth shelter design can use 40-60% less energy compared to above ground structures due to less wind exposure and air infiltration. And with using the land for wall & roof a semi-earth home will blend into any natural landscape.

Earth shelter protects against extreme outdoor temperatures. If outdoor temperatures are between -10°C (14°F) and 10°C (50°F), earth temperatures below the frost line remain between 7°C (45°F) and 13°C (55°F). In the summer sun the earth wall & roof will be charged by the sun, keeping the temperature cooler during the day and warmer during the night with releasing stored heat.
