Natural Attachment:

"What Is Not" and "What Is" David Fisher, 2021-07-27 David Fisher invites us to create our own roadmap for life's journey. For any of us feeling trapped by our own thought habits, this gem of a book offers concrete practices for us to get better acquainted with our humanity and to cultivate benefit for ourselves and our fellow humans. There are many approaches to mindfulness and meditation in the world, and I have often found myself in the hopes of mastering my thoughts and suffering less flitting from one to the next without really landing. Until now, David's book offers a process of active learning with the practices in each chapter assisting in tailoring a nourishing personal practice. I have become more aware of my own habitual patterns of thinking and am more able to let these go if they are not of benefit. The beginning of inner freedom. As a social worker, I would urge helping professionals to work with this book as a means of cultivating equanimity as an antidote to burnout and vicarious trauma. Gisele Benoit MSW

Natural Reason and Natural Law James Carey, 2019-04-05 Natural law, according to Thomas Aquinas, has its foundation in the evidence and operation of natural human reason. Its primary precepts are self-evident. Awareness of these precepts does not presuppose knowledge of or even belief in the existence of God. The most interesting criticisms of Thomas Aquinas's natural law teaching in modern times have been advanced by the political philosopher Leo Strauss and his followers. The purpose of this book is to show that these criticisms are based on misunderstandings and that they are inconclusive at best. Thomas Aquinas's natural law teaching is fully rational. It is accessible to man as man.

Aelred of Rievaulx John R. Sommerfeldt, 2005 For the medieval Cistercian abbot Aelred of Rievaulx, human beings are capable of happiness because human nature is good, but the self-defeating choices of humans have led to their misery. A loving God leads humans to happiness by nudging their free wills toward choosing the good, and then if they respond positively, giving them the power to realize that good. The power or virtue which perfects the human intellect is humility, which is not meekness but self-knowledge gained through introspection and meditation on and through nature and Scripture. The will is perfected through love, without which no human act is good. Love for oneself, for others, and for God are complementary, not competing, acts of the will. A special way of loving is friendship, on which Aelred's teaching is perhaps the most complete and most sophisticated in the history of Christian thought. Perfection is, for Aelred, attainable in this life, since he sees perfection as a process, not a static condition. That condition will be attained in the total fulfillment of the afterlife.

Self and No-Self Dale Mathers, Melvin E. Miller, Osamu Ando, 2013-12-16 This collection explores the growing interface between Eastern and Western concepts of what it is to be human from analytical psychology, psychoanalytic, and Buddhist perspectives. The relationship between these different approaches has been discussed for decades, with each discipline inviting its followers to explore the depths of the psyche and confront the sometimes difficult psychological experiences that can emerge during any in-depth exploration of mental processes. *Self and No-Self* considers topics discussed at the *Self and No-Self* conference in Kyoto, Japan, in 2006. International experts from practical and

theoretical backgrounds compare and contrast Buddhist and psychological traditions providing a fresh insight on the relationship between the two Areas covered include the concept of self Buddhist theory and practice psychotherapeutic theory and practice mysticism and spirituality myth and fairy tale This book explains how a Buddhist approach can be integrated into the clinical setting and will interest seasoned practitioners and theoreticians from analytical psychology psychoanalytic and Buddhist backgrounds as well as novices in these fields

One Health: The Well-being Impacts of Human-nature Relationships Eric Brymer, Elizabeth Louise Freeman, Miles Richardson, 2019-11-07 In recent years there has been a growing body of evidence from fields such as public health architecture ecology landscape forestry psychology sport science psychiatry geography suggesting that nature enhances psychological health and wellbeing Physical activity in the presence of nature feelings of connection to nature engagement with nature specific environmental features e g therapeutic water and trees and images of real and virtual nature have all been posited as important wellbeing facilitators Thus the association between natural environments and health outcomes might be more complex than initially understood Pritchard Richardson Sheffield Karmanov Freeman Akhurst 2015 in the development of wellbeing and health outcomes Furthermore traditional theoretical notions such as Biophilia topophilia restoration theories and stress reduction theories typically used to interpret findings are also being critiqued Often one of the main barriers for practitioners is the vast array of theories that claim to effectively explain research findings but that tend to be only partially relevant e g for Physical activity or restoration focus on the characteristics of the person e g nature relatedness and only some features of the landscape e g therapeutic landscapes This special edition therefore brings together cutting edge ideas and research from a wide set of disciplines with the purpose of exploring interdisciplinary or trans disciplinary approaches to understanding the psychological health and wellbeing benefits of human nature interactions

Cords of Affection Emily Pears, 2022-01-05 In Cords of Affection Constructing Constitutional Union in Early American History Emily Pears investigates efforts by the founding generation s leadership to construct and strengthen political attachments in and among the citizens of the new republic These emotional connections

between citizens and their institutions were critical to the success of the new nation. The founders recognized that attachments do not form automatically and require constant tending. Emily Pears defines and develops a theory of political attachments based on an analysis of the approaches used in the founding era. In particular, she identifies three methods of political attachment: a utilitarian method, a cultural method, and a participatory method. *Cords of Affection* offers a comparative analysis of the theories and projects undertaken by a wide array of political leaders in the early republic and antebellum periods that exemplify each of the three methods. The work includes new historical analysis of the implementation of projects of nationalism and attachment ranging from data on federal funding for internal improvements to analysis of Whig orations. In *Cords of Affection*, Emily Pears offers lessons from history about the strengths, weaknesses, and pitfalls of various approaches to constructing national political attachments. Twenty-first century Americans' attachments to their national government have waned. While there are multiple narratives of this decline, they all have the same core element: a citizenry unwilling to uphold the norms and institutions of American democracy in the face of challenge. When a demagogue or a populist movement or a foreign power threatens action that undermines American democracy, citizens will not come to its defense. Citizens cheer their own side regardless of the means it uses, or they are simply apathetic to the role that institutions and institutional constraints play in keeping us all free and equal. At worst, Americans have come to regard their inherited constitutional foundations as unjust, biased, or ill-equipped for the modern world, and the notion of a shared political community as prejudicial and old-fashioned. They feel little sense of attachment to the American regime. By contrast, the lessons in *Cords of Affection* allow us to consider a broader array of possible tools for the maintenance of today's political attachments.

Microalgal Hydrogen Production Michael Seibert, Giuseppe Torzillo, 2018-03-19 Hydrogen could be the fuel of the future. Some microorganisms can produce hydrogen upon illumination. Biological methods of production could be greener than chemical or physical production methods, but the potential of biological methods is still being harnessed. This comprehensive book highlights the key steps necessary for future exploitation of solar light-driven hydrogen production by microalgae. The highly regarded editors bring together 46 contributors from key institutions in order to suggest and examine the most significant issues that must be resolved to achieve the goal of practical implementation while proposing reliable methodologies and approaches to solve such issues. This 19-chapter book will be an indispensable resource for academics, undergraduate and graduate students, postgraduates, and postdoctoral scholars, energy scientists, biochemical engineers, and policy makers working across the field of biohydrogen and bioenergy.

Living machines Tony J. Prescott, Nathan Lepora, Paul F. M. J. Verschure, 2018-04-13 Contemporary research in science and engineering is seeking to harness the versatility and sustainability of living organisms. By exploiting natural principles, researchers hope to create new kinds of technology that are self-repairing, adaptable, and robust, and to invent a new class of machines that are perceptive, social, emotional, perhaps even conscious. This is the realm of the living machine. Living machines can be divided into two types:

biomimetic systems that harness the principles discovered in nature and embody them in new artifacts and biohybrid systems in which biological entities are coupled with synthetic ones **Living Machines** A handbook of research in biomimetic and biohybrid systems surveys this flourishing area of research capturing the current state of play and pointing to the opportunities ahead Promising areas in biomimetics include self organization biologically inspired active materials self assembly and self repair learning memory control architectures and self regulation locomotion in air on land or in water perception cognition control and communication Drawing on these advances the potential of biomimetics is revealed in devices that can harvest energy grow or reproduce and in animal like robots that range from synthetic slime molds to artificial fish to humanoids Biohybrid systems is a relatively new field with exciting and largely unknown potential but one that is likely to shape the future of humanity This book surveys progress towards new kinds of biohybrid such as robots that merge electronic neurons with biological tissue micro scale machines made from living cells prosthetic limbs with a sense of touch and brain machine interfaces that allow robotic devices to be controlled by human thought The handbook concludes by exploring some of the impacts that living machine technologies could have on both society and the individual exploring questions about how we will see and understand ourselves in a world in which the line between the natural and the artificial is increasingly blurred With contributions from leading researchers from science engineering and the humanities this handbook will be of broad interest to undergraduate and postgraduate students Researchers in the areas of computational modeling and engineering including artificial intelligence machine learning artificial life biorobotics neurorobotics and human machine interfaces will find **Living Machines** an invaluable resource

The Case Against Punishment Deirdre Golash, 2005-01-01 What ends do we expect and hope to serve in punishing criminal wrongdoers Does the punishment of offenders do more harm than good for American society In **The Case against Punishment** Deirdre Golash addresses these and other questions about the value of punishment in contemporary society Drawing on both empirical evidence and philosophical literature this book argues that the harm done by punishing criminal offenders is ultimately morally unjustified Asserting that punishment inflicts both intended and unintended harms on offenders Golash suggests that crime can be reduced by addressing social problems correlated with high crime rates such as income inequality and local social disorganization Punishment may reduce crime but in so doing causes a comparable amount of harm to offenders Instead Golash suggests we should address criminal acts through trial conviction and compensation to the victim while also providing the criminal with the opportunity to reconcile with society through morally good action rather than punishment

Attachment to Urban Natural Areas Robert L. Ryan, 1997 **Advance of Phycology In Japan** J. Tokida, H. Hirose, 1975-06-30 *The Hidden Lives of Brahman* Joël André-Michel Dubois, 2014-02-01 Finalist for the 2014 Best First Book in the History of Religions presented by the American Academy of Religion a kara s thought advaita ved nta or non dual ved nta is a tradition focused on brahman the ultimate reality transcending all particular manifestations words and ideas It is

generally considered that the transcendent brahman cannot be attained through any effort or activity While this conception is technically correct in The Hidden Lives of Brahman Jo l Andr Michel Dubois contends that it is misleading Hidden lives of brahman become visible when analysis of a kara s seminal commentaries is combined with ethnographic descriptions of contemporary Br hmin students and teachers of ved nta a group largely ignored in most studies of this tradition Du bois demonstrates that for a kara as for Br hmin tradition in general brahman is just as much an active force fully connected to the dynamic power of words and imagination as it is a transcendent ultimate

Religious Evolution and the Axial Age

Stephen K. Sanderson,2018-01-25 Religious Evolution and the Axial Age describes and explains the evolution of religion over the past ten millennia It shows that an overall evolutionary sequence can be observed running from the spirit and shaman dominated religions of small scale societies to the archaic religions of the ancient civilizations and then to the salvation religions of the Axial Age Stephen K Sanderson draws on ideas from new cognitive and evolutionary psychological theories as well as comparative religion anthropology history and sociology He argues that religion is a biological adaptation that evolved in order to solve a number of human problems especially those concerned with existential anxiety and ontological insecurity Much of the focus of the book is on the Axial Age the period in the second half of the first millennium BCE that marked the greatest religious transformation in world history The book demonstrates that as a result of massive increases in the scale and scope of war and large scale urbanization the problems of existential anxiety and ontological insecurity became particularly acute These changes evoked new religious needs especially for salvation and release from suffering As a result entirely new religions Zoroastrianism Judaism Christianity Hinduism Buddhism Confucianism and Daoism arose to help people cope with the demands of the new historical era

Rousseau on Education, Freedom, and Judgment

Denise Schaeffer,2014-01-02 In Rousseau on Education Freedom and Judgment Denise Schaeffer challenges the common view of Rousseau as primarily concerned with conditioning citizens passions in order to promote republican virtue and unreflective patriotism Schaeffer argues that to the contrary Rousseau s central concern is the problem of judgment and how to foster it on both the individual and political level in order to create the conditions for genuine self rule Offering a detailed commentary on Rousseau s major work on education Emile and a wide ranging analysis of the relationship between Emile and several of Rousseau s other works Schaeffer explores Rousseau s understanding of what good judgment is how it is learned and why it is central to the achievement and preservation of human freedom The model of Rousseauian citizenship that emerges from Schaeffer s analysis is more dynamic and self critical than is often recognized This book demonstrates the importance of Rousseau s contribution to our understanding of the faculty of judgment and more broadly invites a critical reevaluation of Rousseau s understanding of education citizenship and both individual and collective freedom

Environmental and Architectural Psychology

Ian Donald,2022-06-14 Environmental and Architectural Psychology The Basics is a jargon free and accessible introduction to the relationship between people and their natural and built

environment Exploring everything from the effectiveness of open plan offices to how people respond to life threatening disasters the book addresses issues around sustainability climate change and behaviour and is grounded in theory and ideas drawn from psychology geography and architecture Author Ian Donald introduces both the theoretical underpinnings and the applications of environment behaviour research to solving real world problems encouraging readers to reflect on the role of design and policy in shaping the environments in which they live and work With chapters considering the impact of environment on identity wellbeing crime and spatial behaviour Donald shows us not only how people shape and affect the environment but also in turn how the environment shapes and affects people s thoughts feelings and behaviours Addressing some of the most important questions of our time including how behaviour drives climate change and what we can do about it this is the ideal book for anyone interested in the interactions between architecture the environment and psychology
