Historical Studies of Changing Fertility Charles Tilly, 2015-03-08 The nine papers in this volume examine the historical experience of particular populations in Western Europe and North America in a search for the processes that change fertility patterns The contributors findings enable them to reevaluate some of the conflicting hypotheses that have been advanced for these changes The authors stress the effects on fertility of changing mortality Several theoretical discussions emphasize the importance both of the turnover in adult positions due to mortality and of the highly variable life expectancy of children The empirical analyses consistently reveal strong associations between levels of fertility and mortality On the other hand some essays question whether variations in opportunities to marry acted as quite the regulator that Malthus and many after him have thought In both preindustrial and industrial populations fertility regulation within marriage emerges as the primary mechanism by which

Simmons, 2016-02-02 The Spontaneous Self Paul Breer, 2012-10-22 Many philosophers have argued that free will may be no more than a flattering illusion Few have gone on however to spell out what life would be like without that illusion In The Spontaneous Self Dr Breer explores the many ways in which our everyday experience is likely to be affected by giving up a belief in free will Topics include guilt pride credit blame ambition fear identity power and love His analysis of what we stand to gain and lose by changing our beliefs draws upon the results of an eight year attempt to dispel the illusion of free will in his own life The Spontaneous Self describes the cognitive emotional techniques he devised for uprooting the illusion of free will and the personal transformation that followed when he put those techniques into practice A Laboratory Guide to the Mammalian Embryo David K. Gardner, Michelle Lane, Andrew J. Watson, 2004-01-08 This book pulls together the full range of cell culture biochemical microscopic and genetic techniques to study the early mammalian embryo Until now there has never been such a comprehensive compendium though there have been more focused books of protocol such as Manipulating the Mouse Embryo from Cold Spring Harbor This book is intended to appeal to all constituencies from basic experimental science to clinical and animal science applications **Formal Demography** David P. Smith, 2013-11-11 This book is intended as a relatively nontechnical introduction to current demographic methods It has been several years in preparation beginning from occasional class handouts I wrote to elaborate on essential points of demographic methodology Its growth from scattered notes to an integrated text was a natural process if a gradual one The content of the book addresses three objectives first I have tried to avoid demographic methods that are now dated In some chapters that has meant concentrating on formulas most demographers recognize In the chapters on life tables it meant testing competing formulas on a variety of real and synthetic datasets and dropping or relegating to footnotes those that were least accurate Second I have attempted to give readers a sense of the limits of different formulas and methods I am a terse writer however and for the reader that means most sentences carry weight Chapters should be read attentively with careful regard to commentary as well as to formulas and examples Finally I have tried to make the principal methodologies of the book accessible by offering explanations for formulas that are not obvious by keeping examples to the forefront and by placing relatively specialized topics in chapter appendices Australian Books in Print 1998 Bowker, 1998-04 excellent coverage essential to worldwide bibliographic coverage **AMERICAN REFERENCE BOOKS ANNUAL** This comprehensive reference provides current finding

Congenital Abnormalities and Preterm Birth Related to Maternal Illnesses During Pregnancy Nándor Ács, Ferenc G. Bánhidý, Andrew E. Czeizel, 2010-07-05 The major objective of our studies in the last decade was a systematic analysis of maternal diseases during pregnancy to reveal their possible adverse effects on birth outcomes The two most important factors of infant mortality were partially analyzed structural birth defects known as congenital abnormalities CAs and preterm birth PB In general the objectives of scientific studies might be either to test a new hypothesis or to confirm or confront previously published results However less frequently the authors scientists have personal motivations determined by their professional activities The authors of this book are practicing physicians and genetic epidemiologist who are mainly interested in the following three practical questions 1 The possible adverse effects of pharmaceutical products The possible teratogenic potential of about 170 drugs has been evaluated very thoroughly using the data set of the Hungarian Case Control Surveillance of Congenital Abnormalities HCCSCA in the last 50 years These drugs were used to treat maternal diseases and

the findings of our population based case control studies will be cited in this book and are shown in the Appendix at the end of the book However our long experiences showed two problems in the drug teratology In general the evaluation of clinical doses of these drugs is a particularly difficult challenge due to the modification effects of confounders This problem motivated one of the authors to establish a new model of disaster epidemiology

A Textbook of Clinical Embryology Eliezer

Girsh, 2021-05-06 Personnel working in assisted reproductive technology often lack the opportunities for dedicated training in the specialized techniques and technologies required for the procedures As such success in the form of live birth rates can range from over 50% to less than 10% per treatment cycle This comprehensive introductory textbook is an essential resource for trainee embryologists medical students and nurses The recent revolutions in biotechnology and molecular biology involved in delivering assisted reproductive services are thoroughly discussed Basic knowledge such as the development and physiology of both male and female reproductive systems is covered with practical aspects of IVF including gamete and

embryo manipulation cryopreservation and genetic testing explained in detail A full description of the optimal structure and management of the IVF laboratory is given helping ensure procedures are safe and effective Extensive and highly detailed colour illustrations bring the content to life and aids readers in their understanding *Soil-Subsurface Change* Bruno Yaron, Ishai Dror, Brian Berkowitz, 2012-02-18 This book combines soil science earth science and environmental geochemistry providing comprehensive background information for specialists interested in chemical induced changes in the soil subsurface system Readers are introduced to the chemistry of contaminants that often disturb the natural soil subsurface equilibrium as a result of human activity While the soil subsurface system has in many cases been affected by human impact the effects of chemical contaminants on the actual matrix and properties have been largely neglected The major focus of the book is on changes to the soil subsurface matrix and properties caused by chemical pollution By integrating results available in the literature we observe that chemical pollutants may lead to the irreversible formation of a new soil subsurface regime characterized by a matrix and properties different than those of the natural regime In contrast to the geological time scales dictating natural changes to the matrix and properties of the soil subsurface system the time scale associated with chemical pollutant induced changes is far shorter and extends over a human lifetime scale The numerous examples presented in the book confirm that chemical contamination should be considered as an additional factor in the formation of a contemporary soil subsurface regime that is different than that of the pristine system **Early Pregnancy Loss** Richard W. Beard, Frank Sharp, 2012-12-06 The first few months of any pregnancy are of supreme importance to the success of that pregnancy This statement is so obvious as to be almost a platitude yet it must be said that no aspect of pregnancy has been more neglected in the human than the first three months Little is known of the morphological changes that occur at that time and our knowledge of the mechanisms that control this vital stage of pregnancy is almost non existent The explanation for this neglect of what is an obvious area for study is the difficulty of obtaining normal material It is rare to have material to study from a healthy first trimester pregnancy and the study by Hertig and Rock of early conception found by chance in hysterectomy specimens must be unique The information that we do have about early pregnancy is mostly gained from animal studies or single miscarriages in humans Chromosomal defects are common but are not an explanation for the majority of recurrent miscarriages Obstetricians have hypothesised many causes for this condition and have developed numerous methods for treating it but the studies have been poorly controlled so that our understanding of the causes has not advanced Treatment of women with a history of recurrent miscarriage by paternal leukocyte infusion immunotherapy may be yet another form of treatment that is hailed as a new advance only to be rejected when subject to rigorous testing
