Shteir, 1997 Fourteen essays explore work by women who have disseminated scientific knowledge highlighting women as productive literary and artistic agents within science culture and focusing on science written in the vernacular Contributors discuss subjects such as the dissemination of knowledge in England Canada Australia and America the redefinition of knowledge by post Darwinian women and women of the 20th century and self fashioning Paper edition unseen 17 95 Annotation copyrighted by Book News Inc Portland OR *Reading Popular Physics* Elizabeth Leane, 2007 Elizabeth Leane's *Reading Popular Physics* is a valuable contribution to our understanding of the nature and implications of physics popularizations Focusing particularly on five bestselling books *A Brief History of Time* *The First Three Minutes* *Chaos* *Complexity* and *The Dancing Wu Li Masters* Leane analyzes the textual strategies by which popularizers of science influence the public Her book offers readers a fresh perspective on this highly visible and influential genre

Encyclopedia of Science and Technology Communication Susanna Hornig Priest, 2010-07-14 The explosion of scientific information is exacerbating the information gap between richer poorer educated less educated publics The proliferation of media technology and the popularity of the Internet help some keep up with these developments but also make it more likely others fall further behind This is taking place in a globalizing economy and society that further complicates the division between information haves and have nots and compounds the challenge of communicating about emerging science and technology to increasingly diverse audiences Journalism about science and technology must fill this gap yet journalists and journalism students themselves struggle to keep abreast of contemporary scientific developments Scientist aided by public relations and public information professionals must get their stories out not only to other scientists but also to broader public audiences Funding agencies increasingly expect their grantees to engage in outreach and education and such activity can be seen as both a survival strategy and an ethical imperative for taxpayer supported university based research Science communication often in new forms must expand to meet all these needs Providing a comprehensive introduction to students professionals and scholars in this area is a unique challenge because practitioners in these fields must grasp both the principles of science and the principles of science communication while understanding the social contexts of each For this reason science journalism and science communication are often addressed only in advanced undergraduate or graduate specialty courses rather than covered exhaustively in lower division courses Even so those entering the field rarely will have a comprehensive background in both science and communication studies This circumstance underscores the importance of compiling useful reference materials The *Encyclopedia of Science and Technology Communication* presents resources and strategies for science communicators including theoretical material and background on recent controversies and key institutional actors and sources Science communicators need to understand more than how to interpret scientific facts and conclusions they need to understand basic elements of the politics sociology and philosophy

of science as well as relevant media and communication theory principles of risk communication new trends and how to evaluate the effectiveness of science communication programmes to mention just a few of the major challenges This work will help to develop and enhance such understanding as it addresses these challenges and more Topics covered include advocacy policy and research organizations environmental and health communication philosophy of science media theory and science communication informal science education science journalism as a profession risk communication theory public understanding of science pseudo science in the news special problems in reporting science and technology science communication ethics

In Nature's Name Barbara T. Gates, 2002-04 From the late eighteenth to the early twentieth century hundreds of British women wrote about and drew from nature Some like the beloved children's author Beatrix Potter who produced natural history about hedgehogs as well as fiction about rabbits are still familiar today But others have all but disappeared from view Barbara Gates recovers these lost works and prints them alongside little known pieces by more famous authors like Potter's field notes on hedgehogs reminding us of better known stories that help set the others in context The works contained in this volume are as varied as the women who produced them They include passionate essays on the protection of animals vivid accounts of travel and adventure from the English seashore to the Indian Alps poetry and fiction and marvelous tales of nature for children Special features of the book include a detailed chronology placing each selection in its historical and literary context biographical sketches of each author's life and works a comprehensive bibliography of primary and secondary literature and over sixty illustrations An ideal introduction to women's powerful and diverse responses to the natural world *In Nature's Name* will be treasured by anyone interested in natural history women or Victorian and Edwardian Britain
