1250-1800 H Darrel Rutkin,2019-04-24 This book explores the changing perspective of astrology from the Middle Ages to the Early Modern Era It introduces a framework for understanding both its former centrality and its later removal from legitimate knowledge and practice The discussion reconstructs the changing roles of astrology in Western science theology and culture from 1250 to 1500 The author considers both the how and the why He analyzes and integrates a broad range of sources This analysis shows that the history of astrology in particular the story of the protracted criticism and ultimate removal of astrology from the realm of legitimate knowledge and practice is crucial for fully understanding the transition from premodern Aristotelian Ptolemaic natural philosophy to modern Newtonian science This removal the author argues was neither obvious nor unproblematic Astrology was not some sort of magical nebulous hodge podge of beliefs Rather astrology emerged in the 13th century as a richly mathematical system that served to integrate astronomy and natural philosophy precisely the aim of the New Science of the 17th century As such it becomes a fundamentally important historical question to determine why this promising astrological synthesis was rejected in favor of a rather different mathematical natural philosophy and one with a very different causal structure than Aristotle s **Thornton and Tully's Scientific Books,**

the exotic other and undervalued opposite of the scientific Albanese reads the inaugurators of the scientific revolution against the canonical authors of early modern literature discussing Galileo's Dialogue on the Two Chief World Systems and Bacon's New Atlantis as well as Milton's Paradise Lost and Shakespeare's The Tempest She examines how the newness or novelty of investigating nature is expressed through representations of the New World including the native the feminine the body and the heavens New is therefore shown to be a double sign referring both to the excitement associated with a knowledge oriented away from past practices and to the oppression and domination typical of the colonialist enterprise Exploring the connections between the New World and the New Science and the simultaneously emerging patterns of thought and forms of writing characteristic of modernity Albanese insists that science is at its inception a form of power knowledge and that the modern and postmodern division of Two Cultures the literary and the scientific has its antecedents in the early modern world New Science New World makes an important contribution to feminist new historicist and cultural materialist debates about the extent to which the culture of seventeenth century England is proto modern It will offer scholars and students from a wide range of fields a new critical model for historical practice

The School of Montaigne in Early Modern Europe Warren Boutcher, 2017-03-09 This major two volume study offers an interdisciplinary analysis of Montaigne's Essais and their fortunes in early modern Europe and the modern western university Volume one focuses on contexts from within Montaigne's own milieu and on the ways in which his book made him a patron author or instant classic in the eyes of his editor Marie de Gournay and his promoter Justus Lipsius Volume two focuses on the reader writers across Europe who used the Essais to make their own works from corrected editions and translations in print to life writing and personal records in manuscript The two volumes work together to offer a new picture of the book's significance in literary and intellectual history Montaigne's is now usually understood to be the school of late humanism or of Pyrrhonian scepticism This study argues that the school of Montaigne potentially included everyone in early modern Europe with occasion and means to read and write for themselves and for their friends and family unconstrained by an official function or scholastic institution For the Essais were shaped by a battle that had intensified since the Reformation and that would continue through to the pre Enlightenment period It was a battle to regulate the educated individual's judgement in reading and acting upon the two books bequeathed by God to man The book of scriptures and the book of nature were becoming more accessible through print and manuscript cultures But at the same time that access was being mediated more intensively by teachers such as clerics and humanists by censors and institutions by learned authors of past and present and by commentaries and glosses upon those authors Montaigne enfranchised the unofficial reader writer with liberties of judgement offered and taken in the specific historical conditions of his era The study draws on new ways of approaching literary history through the history of the book and of reading The Essais are treated as a mobile transnational work that travelled from Bordeaux to Paris and beyond to markets in other countries from England and Switzerland to Italy and the Low Countries Close analysis

of editions paratexts translations and annotated copies is informed by a distinct concept of the social context of a text The concept is derived from anthropologist Alfred Gell's notion of the art nexus the specific types of actions and agency relations mediated by works of art understood as indexes that give rise to inferences of particular kinds Throughout the two volumes the focus is on the particular nexus in which a copy an edition an extract is embedded and on the way that nexus might be described by early modern people
