Rapidly Solidified Powder Aluminum Alloys Morris E. Fine, E. A. Starke, 1986 *Aluminum Alloys--Contemporary Research and Applications* A. K. Vasudevan, Roger D. Doherty, 2012-12-02

This book discusses the structure and properties of the current and potential aluminum alloys in terms of their structure and structural transformations by new processing methods and the relationship between structure and mechanical and other properties The alternative materials that challenge aluminum are considered as well since the challenge of new competitive materials is a strong influence on innovation The book bridges the gap between current scientific understanding and engineering practice It is an up to date reference that will be of use to researchers and advanced students in metallurgy and materials engineering

Physical Metallurgy and processing of Intermetallic Compounds N.S. Stoloff, V.K. Sikka, 2012-12-06 The attractive physical and mechanical properties of ordered intermetallic alloys have been recognized since early in this century However periodic attempts to develop intermetallics for structural applications were unsuccessful due in major part to the twin handicaps of inadequate low temperature ductility or toughness together with poor elevated temperature creep strength The discovery in 1979 by Aoki and Izumi in Japan that small additions of boron caused a dramatic improvement in the ductility of Ni₃Al was a major factor in launching a new wave of fundamental and applied research on intermetallics Another important factor was the issuance in 1984 of a National Materials Advisory Board report entitled Structural Uses for Ductile Ordered Alloys which identified numerous potential defense related applications and proposed the launching of a coordinated development program to gather engineering property and processing data A substantial research effort on titanium aluminides was already underway at the Air Force Materials Laboratory at Wright Patterson Air Force Base in Ohio and with Air Force support at several industrial and university laboratories Smaller programs also were under way at Oak Ridge National Laboratory under Department of Energy sponsorship These research efforts were soon augmented in the United States by funding from Department of Defense agencies such as Office of Naval Research and Air Force Office of Scientific Research and by the National Science Foundation

 Green, Howard Robertson, 2013-11-11 The Science and Engineering of Materials Third Edition continues the general theme of
 the earlier editions in providing an understanding of the relationship between structure processing and properties of
 materials This text is intended for use by students of engineering rather than materials at first degree level who have
 completed prerequisites in chemistry physics and mathematics The author assumes these students will have had little or no
 exposure to engineering sciences such as statics dynamics and mechanics The material presented here admittedly cannot
 and should not be covered in a one semester course By selecting the appropriate topics however the instructor can
 emphasise metals provide a general overview of materials concentrate on mechanical behaviour or focus on physical
 properties Additionally the text provides the student with a useful reference for accompanying courses in manufacturing

design or materials selection In an introductory survey text such as this complex and comprehensive design problems cannot be realistically introduced because materials design and selection rely on many factors that come later in the student's curriculum To introduce the student to elements of design however more than 100 examples dealing with materials selection and design considerations are included in this edition *Complex Concentrated Alloys (CCAs)* Sundee Mukherjee, 2020-11-04

This book is a collection of several unique articles on the current state of research on complex concentrated alloys as well as their compelling future opportunities in wide ranging applications Complex concentrated alloys consist of multiple principal elements and represent a new paradigm in structural alloy design They show a range of exceptional properties that are unachievable in conventional alloys including high strength ductility combination resistance to oxidation corrosion wear resistance and excellent high temperature properties The research articles reviews and perspectives are intended to provide a wholistic view of this multidisciplinary subject of interest to scientists and engineers

Fiber-reinforced Metal-matrix Composites--1967 K. R. Hanby, 1968 The report is intended to update DMIC Report 241 which describes research on fiber reinforced metal matrix composites for the period 1964-1966 A two page summary outlines the current state of the art of these composites and is followed by a discussion of 1967 research on the composites arranged according to matrix and fiber materials The bulk of the report consists of summaries of 1967 research programs arranged by programs Author **Handbook of Non-Ferrous Metal Powders** Oleg D Neikov, N. A. Yefimov, Stanislav Naboychenko, 2018-11-30
