Joshi,J.S. Smith,2012-12-06 With the approach of the 21st century and the current trends in manufacturing the role of computer controlled flexible manufacturing an integral part in the success of manufacturing enterprises will take Manufacturing environments are changing to small batch with batch sizes diminishing to a quantity of one larger product variety production on demand with low lead times with the ability to be agile This is in stark contrast to conventional manufacturing which has relied on economies of scale and where change is viewed as a disruption and is therefore detrimental to production

Computer integrated manufacturing CIM and flexible manufacturing practices are a key component in the transition from conventional manufacturing to the new manufacturing environment. While the use of computers in manufacturing from controlling individual machines NC Robots AGVs etc to controlling flexible manufacturing systems FMS has advanced the flexibility of manufacturing environments it is still far from reaching its full potential in the environment of the future. Great strides have been made in individual technologies and control of FMS has been the subject of considerable research but computerized shop floor control is not nearly as flexible or integrated as hyped in industrial and academic literature. In fact the integrated systems have lagged far behind what could be achieved with existing technology.
