As governments strive to discharge their responsibilities and fulfill their tasks, they evolve structurally, building on their core infrastructure to levels of operational maturity. There are four stages of this institutional model as represented in Fig. 3: (1) Basic, (2) Integrated, (3) Interactive and (4) Proactive. At the basic level, the government fulfills its duties and goes about its tasks, each department of government independently providing services. At the Integrated stage the different government departments begin to integrate through data sharing processes. As systems evolve further, business processes and their applications integrate to provide interactive services with increased citizen participation in government. The most evolved government would be one offering its services with 24-hour availability government and the citizen, as its central focus, given a way in all the administrative processes that affect daily life. This model with an evolution brings out to the present focus one-Government.

Fig. 3 Government maturity phases

In the e-Government context, integration and citizen participation are functions of the availability of the government for citizens. Greater availability would imply more citizen participation. More participation would mean a more pro-active government, sharing the responsibilities and duties with its citizens and ensuring delivery of quality services to citizens to improve quality of life [13,15]. Let us explore the role of ICT in the government context in the following section.

IV. ICT Role in Government

The role of ICT in government transformation and evolution cannot be overstated. Let us look at an example of government practice in this domain. Fig. 4 depicts a diagram developed by the European Commission that illustrates the role of ICT in enabling various e-government models for the European Union (EU) in 2003 [16]. It illustrates the projected adoption of technology in six distinct stages. The first stage concentrates on the development of a clear taxonomy of value-based government roles and the identification of key areas of transformation where ICT can make a substantial impact. The second stage involves identifying "pressuring" technologies that may contribute to the enhancement of citizen's governmental tasks and activities. The third stage represents the identification of what have been labelled the "hot spots" of government transformation. This stage should result in the identification and clustering of combinations of roles and technologies in various "hot spots".

Fig. 4. ICT and the Government. Source: [16]

The fourth stage depends upon the way future trends manifest themselves. They might present an scenario in which the consequences of pressuring ICT developments are actualized in new e-government services and new e-government models. These ICT innovations based service models might show themselves in the broader context of related social, economic, institutional and organizational trends. The fifth stage represents the future-oriented framework in which the benefits and impacts of e-government are measured. The sixth stage represents research work towards, and framing of, ape policy changes that enable successful e-transformations.

The components presented in the above diagram form the core of this model for ICT in a government context. The model provides an archetype for government transformations and can inform long-term strategic planning. It can be applied to identify emerging trends and opportunities arising in the process of evolution of new information and communication technologies, in order to enhance government performance and capacity for governance in 2020 [16].

V. The Transition to the Knowledge Age

In today's climate of political and socio-economic change, communication is playing a decisive role in promoting development [1]. We are living in the age of information and its digital world of instant communication. The information revolution has dramatically increased the potential for sharing information across the globe [17]. This information age is now evolving.

The emergence of a series of new communications concepts and applications in this age of information revolution has created more opportunities and possibilities for both users and services providers. Forrester's research has identified this new age as the age of the customer [18]. See also Fig. 5. Forrester points out that the Age of Customer is not about 'customer-centricity' thinking or the customer is always right. Rather, it is about the empowerment of customers so that

Internet are interacting with each other in a Chinese context In so doing Liu sheds light on what it means to be a Chinese today how Chineseness may be re constructed in the Internet Age and what the implications of the emerging form of identity are for contemporary and future Chinese societies as well as the world Technologies of Religion Sam Han,2016-02-05 Bringing together empirical cultural and media studies of religion and critical social theory Technologies of Religion Spheres of the sacred in a post secular modernity investigates powerful entanglement of religion and new media technologies taking place today taking stock of the repercussions of digital technology and culture on various aspects of religious life and contemporary culture more broadly Making the argument that religion and new media technologies come together to create spheres environments produced by an architecture of digital technologies of all sorts from projection screens to social networking sites the book suggests that prior social scientific conceptions of religious worship participation community and membership are being recast Using the case of the strain of American Christianity called multi site an emergent and growing church model that has begun to win favor largely among Protestants in the last decade the book details and examines the way in which this new mode of religiosity bridges the realms of the technological and the physical Lastly the book situates and contextualizes these developments within the larger theoretical concerns regarding the place of religion in contemporary capitalism Technologies of Religion Spheres of the sacred in a post secular modernity offers an important contribution to the study of religion media technology and culture in a post secular world *Internet and Society* Christian Fuchs,2007-12-12 By outlining a social theory of the internet and the information society this book demonstrates how the ecological economic political and cultural systems of contemporary society have been transformed by new information and communication technologies **Network Governance of Global Religions** Michel S. Laguerre,2012-03-28 This study seeks to explain three models of network governance embedded in digital practices that the mainstream monotheistic religions Judaism Catholic Christianity and Islam have used to lead and manage the worldwide distribution of their local nodes exploring the connection between network governance and its digital embeddedness and showing how the latter enhances the performance of the former **Disorder and the Disinformation Society** Jonathan Paul Marshall,James Goodman,Didar Zowghi,Francesca da Rimini,2015-04-17 This book is the first general social analysis that seriously considers the daily experience of information disruption and software failure within contemporary Western society Through an investigation of informationalism defined as a contemporary form of capitalism it describes the social processes producing informational disorder While most social theory sees disorder as secondary pathological or uninteresting this book takes disordering processes as central to social life The book engages with theories of information society which privilege information order offering a strong counterpoint centred on disinformation Disorder and the Disinformation Society offers a practical agenda arguing that difficulties in producing software are both inherent to the process of developing software and in the social dynamics of informationalism It outlines the dynamics of software failure as they impinge on of information workers and on

daily life explores why computerized finance has become inherently self disruptive asks how digital enclosure and intellectual property create conflicts over cultural creativity and disrupt informational accuracy and scholarship and reveals how social media can extend but also distort the development of social movements **Migration, Diaspora and Information Technology in Global Societies** Leopoldina Fortunati,Raul Pertierra,Jane Vincent,2013-03-01 Migrants and diaspora communities are shaped by their use of information and communication technologies This book explores the multifaceted role played by new media in the re location of these groups of people assisting them in their efforts to defeat nostalgia construct new communities and keep connected with their communities of origin Furthermore the book analyses the different ways in which migrants contribute along with natives in co constructing contemporary societies a process in which the cultures of both groups are considered Drawing on contributions from a range of disciplines including sociology anthropology psychology and linguistics it offers a more profound understanding of one of the most significant phenomena of contemporary international societies the migration of nearly a billion people worldwide and the relationship between technology and society *Social Media, Politics and the State* Daniel Trottier,Christian Fuchs,2014-07-17 This book is the essential guide for understanding how state power and politics are contested and exercised on social media It brings together contributions by social media scholars who explore the connection of social media with revolutions uprising protests power and counter power hacktivism the state policing and surveillance It shows how collective action and state power are related and conflict as two dialectical sides of social media power and how power and counter power are distributed in this dialectic Theoretically focused and empirically rigorous research considers the two sided contradictory nature of power in relation to social media and politics Chapters cover social media in the context of phenomena such as contemporary revolutions in Egypt and other countries populism 2 0 anti austerity protests the fascist movement in Greece s crisis Anonymous and police surveillance **Privacy and Capitalism in the Age of Social Media** Sebastian Sevignani,2015-08-27 This book explores commodification processes of personal data and provides a critical framing of the ongoing debate of privacy in the Internet age using the example of social media and referring to interviews with users It advocates and expands upon two main theses First people s privacy is structurally invaded in contemporary informational capitalism Second the best response to this problem is not accomplished by invoking the privacy framework as it stands because it is itself part of the problematic nexus that it struggles against Informational capitalism poses weighty problems for making the Internet a truly social medium and aspiring to sustainable privacy simultaneously means to struggle against alienation and exploitation In the last instance this means opposing the capitalist form of association online and offline Is There a Home in Cyberspace? Heike Mónika Greschke,2012-08-21 How is global togetherness possible How does the availability of the Internet alter migrants everyday lives and senses of belonging This book introduces an alien people inhabiting a specific common virtual space in the World Wide Web while the members of this space most of them ethnic

Paraguayans are physically located in many different parts of the world By developing an innovative and uniquely adequate set of research methods the author explores the interrelation of media and migration practices in their own right and sheds light not only on the living conditions of contemporary Paraguayan migrants but also on emerging global forms of living together The concentration on a single case facilitates an in depth understanding of contemporary migration practices cultural meanings of digital media and senses of belonging The book discusses empirical data methods and theoretical concepts in a reflexive writing style allowing readers to follow the research process and to learn from its choices and challenges which are rarely visible in most research reports The reflexive research procedure contributes not only to the understanding of social realities in the light of globalization but also to an advancement of sociological methods and concepts for researching social phenomena in global landscapes and mediatization **ICT, Public Administration and Democracy in the Coming Decade** A.J. Meijer,F. Bannister,M. Thaens,2013-06-20 The physicist Neils Bohr allegedly wrote that Prediction is very difficult especially about the future Many academics believe that serious scholars should never attempt to write about the future but some awareness of the ways in which the future of e government may evolve is needed if well grounded long term decisions about issues such as infrastructures institutions and educational programs are to be made In addition future oriented research is of the utmost importance for informed public debate about technological developments with far reaching societal implications This book marks the 25th anniversary of the permanent study group on e government of the European Group for Public Administration and the papers here were first presented at their 2012 meeting in Bucharest Romania The invited authors were not asked for rigorous analyses based on systematic empirical research or deeply rooted in a theoretical framework instead they were challenged to write thoughtful and measured but provocative essays about ICT and public administration in the coming decade Their contributions are reflections on the nature of new and emerging technologies in the public sector and their impact on government and on democracy itself The book is divided into three sections the past and present as starting point for thinking about the future of e government imagining the future of government and implications for research and practice The many questions raised by developments in ICT for future public administration are presented in a clear and thought provoking manner and merit more debate This volume represents a departure from the normal run of academic publications It is intended both to provoke academics and administrators to think about questions which will affect all of our futures and to offer a range of creative ideas about how the opportunities presented by technology can be exploited to provide better government and governance Electronic Government and Electronic Participation H.J. Scholl,O. Glassey,M.F.W.H.A.
