ASTEROIDS DEADLY IMPACT. National Geographic Book Service,1997     *Asteroids* ,     **Asteroids** narrator  
ROBERTSON,2004     **National Geographic Treasures** ,     **A World After an Asteroid Strike** Alex Woolf,2013-07  
Imagines what the world would be like if an asteroid struck Earth speculating on the types of immediate and long term damage that would result and how people would adapt to their new environment     **Asteroid Strike** Alex Woolf,2013-06-20  
Can you imagine what our lives would be like after a devastating asteroid strike What effect would the resulting tsunami storms and dust cloud have What would happen to the climate wildlife and our food supplies This book traces the possible consequences of a global event on this scale with ideas and evidence based on similar scenarios that are a part of fact and fiction     **Asteroids** Curtis Peebles,2016-04-26 Asteroids suggest images of a catastrophic impact with Earth triggering infernos tidal waves famine and death but these scenarios have obscured the larger story of how asteroids have been discovered and studied During the past two centuries the quest for knowledge about asteroids has involved eminent scientists and amateur astronomers patient research and sudden intuition advanced technology and the simplest of telescopes newspaper headlines and Cold War secrets Today researchers have named and identified the mineral composition of these objects They range in size from 33 feet to 580 miles wide and most are found in a belt between the orbits of Mars and Jupiter Covering all aspects of asteroid investigation Curtis Peebles shows how ideas about the orbiting boulders have evolved He describes how such phenomena as the Moon s craters and dinosaur extinction were gradually and by some scientists grudgingly accepted as the results of asteroid impacts He tells how a band of icy asteroids rimming the solar system first proposed as a theory in the 1940s was ignored for more than forty years until renewed interest and technological breakthroughs confirmed the existence of the Kuiper Belt Peebles also chronicles the discovery of Shoemaker Levy 9 a comet with twenty two nuclei that crashed into Jupiter in 1994 releasing many times the energy of the world s nuclear arsenal Showing how asteroid research is increasingly collaborative the book provides insights into the evolution of scientific ideas and the ebb and flow of scientific debate     Extinctions of Living Things Michael Bright,2008-10-04 This volume examines the history of extinctions on Earth     *Shoemaker by Levy* David H. Levy,2021-02-09 It was a lucky twist of fate when in the early1980s David Levy a writer and amateur astronomer joined up with the famous scientist Eugene Shoemaker and his wife Carolyn to search for comets from an observation post on Palomar Mountain in Southern California Their collaboration would lead to the 1993 discovery of the most remarkable comet ever recorded Shoemaker Levy 9 with its several nuclei five tails and two sheets of debris spread out in its orbit plane A year later Levy would be by the Shoemakers side again when their comet ended its four billion year long journey through the solar system and collided with Jupiter in the most stunning astronomical display of the century Not only did this collision revolutionize our understanding of the history of the solar system but it also offered a spectacular confirmation of one scientist s life work As a close friend and colleague of Shoemaker

who died in 1997 at the age of 69 Levy offers a uniquely insightful account of his life and the way it has shaped our thinking about the universe Early in his training as a geologist Shoemaker suspected that it wasn't volcanic activity but rather collisions with comets and asteroids that created most of the craters on the moon and most other bodies in the solar system Convincing the scientific community of the plausibility of impact theory and revealing its power for penetrating mysteries such as the extinction of the dinosaurs and the timing of the Earth's eventual demise became Shoemaker's mission Through conversations with Shoemaker and his family Levy reconstructs the journey that began with a young geologist's serious desire to go to the moon in the late 1940s Sent by the government to find a way to harvest plutonium Shoemaker instead found evidence in desert craters for what became his impact theory While he never became an astronaut he did become the first geologist hired by NASA and subsequently set the research agenda for the first manned lunar landing After a series of victories and setbacks for Shoemaker the collision of Shoemaker Levy 9 with Jupiter provided the most convincing proof to date of the role of impacts in our solar system Levy's explanation of the scientific reasoning that guided Shoemaker in his career up to this dramatic point as well as his personal portrait of a man who found white water rafting to be an easy way to relax sets these fascinating events in a human scale This biography shows what Shoemaker's legacy will be for our understanding of the story of the Earth well into the twenty first century

**Fire in the Sky** Gordon L. Dillow, 2020-08-04

This accessible and always entertaining Booklist combination of history pop science and in depth reporting offers a fascinating account of the asteroids that hit Earth long ago and those streaming toward us now as well as how prepared we are against asteroid caused catastrophe One of these days warns Gordon Dillow the Earth will be hit by a comet or asteroid of potentially catastrophic size The only question is when In the meantime we need to get much better at finding objects hurtling our way and if they're large enough to penetrate the atmosphere without burning up figure out what to do about them We owe many of science's most important discoveries to the famed Meteor Crater a mile wide dimple on the Colorado Plateau created by an asteroid hit 50 000 years ago In his masterfully researched Fire in the Sky Dillow unpacks what the Crater has to tell us Prior to the early 1900s the world believed that all craters on the Earth and Moon were formed by volcanic activity Not so The revelation that Meteor Crater and others like it were formed by impacts with space objects has led to a now accepted theory about what killed off the dinosaurs and it has opened up a new field of asteroid observation that is brimming with urgency Dillow looks at great asteroid hits of the past and modern day asteroid hunters and defense planning experts including America's first Planetary Defense Officer Satellite sensors confirm that a Hiroshima scale blast occurs in the atmosphere every year and a smaller one kiloton blast every month While Dillow makes clear that the objects above can be deadly he consistently inspires awe with his descriptions of their size makeup and origins Both a riveting work of popular science and a warning to not take for granted the space objects hurtling overhead Fire in the Sky is ultimately a testament to our universe's celestial wonders
