

The plan for planning is based on the following fundamental concepts:

1. Participative Planning: Because the principal value of planning lies in doing it rather than in consumption of its products (plans), all those public and private organizations and agencies that are subject to its effects and responsible for its effectuation should participate in the planning process.
2. Continuous Planning: Because of the changing relationships between components of the systems planned for, the changing characteristics of their environments, and the changing nature of public needs and demands, planning should be continuous and plans should be considered only as progress reports of a continuous process.
3. Integrated Planning: Because transportation is only one aspect of communal life and all such aspects are interconnected, transportation planning must take planning of these other aspects into account and seek to integrate itself with them.
4. Coordinated Planning: Because transportation is managed and operated at many levels in the public and private domain, planning should take place at each of these levels but should be coordinated with respect to the totality of needs and demands it is intended to satisfy.

## **National Transportation Planning:**

**National Transportation Planning** Adib Kanafani, Daniel Sperling, 2012-12-06 Soon after starting work on the development of a methodology for national transportation planning in Venezuela we realized the importance of an integrated management process for such an effort We also realized the absence in the literature of specific guidelines on how to manage and conduct a transportation planning effort The literature on the subject of national transportation planning is predominantly theoretical and technical in nature To a large extent the absence of literature on management and broad based methodological approaches reflects the limited and ad hoc nature of the experience in national transportation planning This book is an attempt to fill that gap The main objective of the book is to show one way by which a methodology for national transportation planning can be integrated into a process management framework It reports on the experience that the authors had in the Venezuelan case as well as in earlier national planning efforts The book is not intended as a theoretical discussion of planning Instead it adopts a particular theoretical stand and proceeds on that basis to develop a program for applying a specific methodology The intention is to leave as much of the details and elaborations of that methodology to the user This is motivated by two considerations The first is a pragmatic attempt to limit the scope of the book

Dept. of Transportation, 1970 **Urban Transportation Planning in the United States** Edward Weiner, 1999-02-28 The development of U S urban transportation policy over the past 50 years illustrates the changing relationship between federal state and local governments This comprehensive text examines the evolution of urban transportation planning from early developments in highway planning in the 1930s to the concern for sustainable development and pollution emissions Focusing on major national events the book discusses the influence of legislation regulations conferences federal programs and advances in planning procedures and technology The book offers an in depth look at the most significant event in transportation planning the Federal Aid Highway Act of 1962 Creating a federal mandate for a comprehensive urban transportation planning process carried out cooperatively by states and local governments with federal funding this act was crucial in the spread of urban transportation Claiming that urban transportation planning is more sophisticated costly and complex than its highway and transit planning predecessors the

book demonstrates how urban transportation planning evolved in response to changes in such factors as environment energy development patterns intergovernmental coordination and federal transit programs It further illustrates how broader concerns for global climate change and sustainable development have braided the purview of transportation planning
