After the Map William Rankin,2016-07 Over the course of the twentieth century there was a major shift in practices of mapping as centuries old methods of land surveying and print publication were incrementally displaced by electronic navigation systems William Rankin argues that although this shift did not render traditional maps obsolete it did revise the goals of the mapping sciences as a whole Military cartographers and civilian agencies alike developed new techniques for tasks that exceeded the capabilities of paper such as aiming long range guns navigating in featureless environments regularizing air travel or drilling for offshore oil *After the Map* reveals the major conceptual ramifications of these and other changes and in doing so offers a new way of understanding the central political geographic shift of the twentieth century Seen first and foremost as affecting a transformation in the nature of territory the change from paper mapping to electronic systems is not a story about technological improvement or the wizardry of precision instead it is about the kind of geographic knowledge and therefore governance that can exist in the first place
