National Oil Companies Leslie E. Grayson, 1981 [National Oil Companies and Value Creation](#) Silvana Tordo, 2011-07-13 National Oil Companies NOCs directly or indirectly control the majority of oil and gas reserves As such they are of great consequence to their country s economy to importing countries energy security and to the stability of oil and gas markets The paper analyzes the available evidence on the objectives governance and performance of 20 NOCs from both net importing and net exporting countries and draws conclusions about the design of policies and measures that are more likely to lead to social value creation NOCs differ from private companies on a number of very important variables including the level of competition in the market in which they operate their business profile along the sector value chain and their degree of commercial orientation and internationalization Most share some core characteristics they are usually tied to the national purpose and serve political and economic goals other than maximizing the firm s profits This paper introduces a conceptual model to analyze value creation by NOCs that takes into consideration their complex objective function Our analysis aims to answer the following questions Are certain corporate governance arrangements more suited than others to promote value creation Is good geology a pre condition for NOC value creation Are there benefits from exposing the NOC to competition from private oil companies Does the development of forward and backward linkages hamper NOC value creation

The Oil Companies and the Arab World Giacomo Luciani, 2016-03-02 For many years vertical integration characterized the international oil industry with the same company controlling the entire process from crude exploration and production to the retailing This structure was radically transformed in the 1970s and this book originally published in 1984 examines whether the dis integration which resulted was a long term trend or a temporary phase It examines the attitude of the major international oil companies discusses the policies adopted by oil producing and oil importing countries and the limits of government to government deals underlined The political and strategic implications of re integration are explored and relations between oil exporters and importers and between the USA Europe and the Arab world discussed

The Non-commercial Objectives of National Oil Companies Lin McGroary, 2015 National oil companies NOCs play an important role in the international oil and gas industry collectively NOCs control approximately 90% of worldwide oil reserves NOC are either wholly or partially owned by their country's government and as such can be used as a tool to meet the government's aims An NOC can maximize profits which maximizes revenues to the government or the government can use the NOC to fulfill its non commercial goals This paper focuses on how non commercial goals affect profitability and make a national oil company more susceptible to corruption I argue that NOCs that follow non commercial goals are less likely to be successful commercially however there are different non commercial goals that affect commerciality differently NOCs that follow specific non commercial goals such as economic development are also more susceptible to corruption this is because these goals lend themselves to governments that are trying to establish political legitimacy I look at case studies of six different countries Saudi Arabia China Norway Venezuela Nigeria and Russia and their associated NOCs to establish how non commercial goals affect the NOCs Other factors also affect the commerciality of NOCs factors such as the legal framework of the country and whether regulations are well established I conclude by comparing the national oil companies and their non commercial objectives and exploring the differences between the companies

Papua New Guinea Oil and Gas Sector, Energy Policy, Laws and Regulations Handbook Volume 1 Principal Laws, Regulations and Policies IBP, Inc., 2019-04-10 2011 Updated Reprint Updated Annually Papua New Guinea Oil Gas Sector Energy Policy Laws and Regulations Handbook

Introduction to Futures and Options Donald Spence, 1997-08-27 This is a comprehensive guide

to the workings of the world's commodity and financial futures and options markets. It examines the markets and instruments including the OTC market and evaluates the likely developments in futures and options. *The Oil Business and the State* Øystein Noreng, 2021-10-18 National oil companies are big business with about 80 percent of the world's proven oil reserves and they are crucial to the world's energy supplies. They are giants some of the world's largest companies measured by market capitalisation, cash flow and investment. Little is known about their modus operandi: how they make decisions about investment and production or about relations with their government owners. However, it is known that they conduct business with a political mandate, often with multiple long-term objectives broadly defined and hard to quantify. Unclear mandates give national oil companies leeway to pursue their own distinctive interests apart from those of the government owner. As investors, governments are less zealous than private investors. They generally observe multiple objectives, not only return on capital. Therefore, the senior management of national oil companies enjoy more discretionary power and consider longer time horizons than their counterparts in the private sector. *The Oil Business and the State* explains the practice of state ownership in a capital-intensive industry with high risks and high return and how these companies act in a market with imperfect competition. This book looks to give readers more insight into the oil industry, into the background of oil-exporting countries as well as the economic and political challenges confronting them, including problems of state ownership. The book discusses wider consequences of China replacing the United States as the world's leading oil importer. It will be of interest to researchers, academics and students in the fields of international business, management, history, corporate governance, political economy and economic development of oil-rich countries. *OPEC National Oil Company Profiles*, 1980 [Oil In The World Economy](#) R. W. Ferrier, A. Fursenko, 2016-03-02 This book discusses the oil industry and its impact on the world economy in the twentieth century. It examines the importance of oil in different sectors from 1900-1973 and stresses the relevance of oil as a factor in modern economic history, not only in national terms but also within an international context. The book includes chapters on American policy towards developing economies in the first half of the 20th century, the policy of Russian oil exports in the 20s and 30s, the financing of the German and French oil industries and the role of oil in the Japanese economy, a major industrial country without oil resources. On the international front, the book covers the impact of the Middle East national oil companies, the effect of oil on the developing countries of South America and the relevance of the oil crisis of 1973. **The Changing Role of National Oil Companies in International Energy Markets**, 2007
