Many chemotherapeutic agents are available in today's market that are highly effective against a variety of cancer types; however, the major drawbacks of these chemotherapeutic agents are the many side effects. As an alternative to these chemotherapeutic agents, there are a number of natural agents that are effective against cancer that have been tested in preclinical and clinical models over the years. These natural products must be documented and discussed in order to provide a thorough overview of all the options available for cancer treatment. The Handbook of Research on Natural Products and Their Bioactive Compounds as Cancer Therapeutics emphasizes the list of natural agents against all types of cancers and discusses the current state of research in the fields of natural products and their derivatives against cancer in preclinical and clinical models. This book also provides insight into the applications of meditation and mindfulness-based interventions in clinical and non-clinical conditions. Covering topics such as cancer therapy, antioxidants, and flavonoids, it is ideal for students, research scholars, academicians, professors, scientists, oncologists, doctors, and medical practitioners. Covers cost-effective green approaches in the development of anticancer drugs. Natural compounds as inducers of cell

death Marc Diederich, Karoline Noworyta, 2012-08-31 Cancer still remains a most important killer and even though synthetic chemotherapeutic agents are currently used they are cost intensive and do not always meet the expectations. In parallel there is increasing evidence for the potential of nature derived compounds on the inhibition of different steps of cancer initiation, promotion and progression. We believe that all diseases can be found in Nature but that Nature also provides the efficient cures as said the Prophet of Allah: Allah did not create any illness without also creating the remedy. The content of this book gives a multi disciplinary approach into the anti cancer research field related to natural products and dietary compounds. Mainly it covers the area of antitumor activity through an in depth description of the cytotoxic, anti inflammatory and anti oxidant properties in cancer inflammatory and cardio vascular diseases. The cell death inducing mechanisms, apoptosis, anti proliferative activity, angiogenesis, cell cycle control, cytostatic property and autophagy give an overview of how natural products are able to target cancer cells. Anticancer Plants: Clinical Trials and Nanotechnology Mohd Sayeed Akhtar, Mallappa Kumara Swamy, 2018-07-03 Cancer is one of the leading causes of death in human beings Though several synthetic medicines are used to treat cancer they are largely inefficient and unsafe In contrast plants which have been used for medicinal purposes since time immemorial have proved to be useful in fighting cancer with natural compounds from plants and their derivatives offering safe and effective treatment and management for several types of cancer Plants such as *Catharanthus roseus* *Podophyllum peltatum* *Taxus brevifolia* *Camptotheca acuminata* *Andrographis paniculata* *Crateva nurvala* *Croton tonkinensis* *Oplopanax horridus* etc are important source of chemotherapeutic compounds These plants have proven their value in the treatment of cancer and various other infectious diseases and several common anticancer compounds such as taxol podophyllotoxins camptothecin vinblastine vincristine homoharringtonine etc have been isolated and purified from these medicinal plants Unfortunately many of these anticancer plants have become endangered due to ruthless and irresponsible harvesting practices Hence there is a need to conserve these species and to propagate them on a large scale using plant tissue culture Alternatively plant cell tissue and organ culture biotechnology could be adopted to produce these anticancer compounds without the need for cultivation A better grasp and continuing exploration of these isolated molecules and products could provide a powerful alternative means of reducing cancer risk
