Ecological Studies of Six Endangered Butterflies (Lepidoptera, Lycaenidae) Richard A. Arnold,Richard Arthur

Arnold,1983-01-01 **Courtship and Mating in Butterflies** Raymond J.C. Cannon,2019-12-30 The aim of this book is to present a readable account of butterfly behaviour based on field observations great photographs and the latest research The main focus is on courtship and mating including perching searching and territorial behaviour but to understand these subjects it is necessary to explain how mates are chosen and this requires sections on wing colours and patterns A chapter on butterfly vision is also essential in terms of how butterflies see the world and each other There have been exciting discoveries in all of these fields in recent years including butterfly vision butterfly photoreceptors wing patterns molecular biology wing colouration structural colours and nano architecture mating strategies and female choice ecology and behaviour *Bees of the New Genus Ctenoceratina in Africa, South of the Sahara (Hymenoptera: Apoidea)* Howell V. Daly,1988-01-01 The African continent has a rich fauna of insects many of which are unstudied This monograph treats one such group known as the small carpenter bees Thirteen biological species in a new genus are described and a key for identification and details of their nests and natural enemies are given **The Wild Silk Moths of North America** Paul M. Tuskes,Michael M. Collins,James Tuttle,2019-05-15 The Saturniidae are among the largest and showiest moths in North America This comprehensive work covers the life history and taxonomy of a hundred species and subspecies of these Lepidoptera The beautiful adults and larvae of all species are illustrated in thirty color plates which are supported by line drawings of cocoons distribution maps and photographs of behavior More than a natural history guide this book includes chapters in population biology life history strategies disease and parasitoids and the importance of silk moths of human culture The systematic account emphasizes genetic differences among populations and the process of speciation and presents new information on experimental hybridization and life histories For the student researcher and naturalist here is practical information on collecting rearing and conducting original research The entire text is referenced to an extensive bibliography **The Cerambycidae of North America, Part VII, No. 1** Earle Gorton Linsley,John A. Chemsak,1984-01-01 This volume concludes the taxonomy and classification of the family Cerambycidae of America north of Mexico This part includes the remainder of the subfamily Lamiinae tribes Acanthocinini Cyrtinini Saperdini Phytoeciini Tetraspini and Hemilophini The 32 genera and 138 species are all fully described with keys included to separate all taxa Complete synonymical bibliographies are presented along with 54 illustrations *Cladistic Analysis of North American Platynini and Revision of the Agonom Extensicolle Species Group (Coleoptera, Carabidae)* James Kenneth Liebherr,1986-01-01 Cladistic analysis based on internal male female reproductive characters and external characters is used to group exemplar taxa in the carabid tribe Platynini A classification key to genera

in North America and a key to species groups of *Agonum* in North America north of Mexico are presented The *Agonum* *extensicolle* species group comprises seven species *A. cyanope* Bates *A. extimum* Liebherr n. sp. *A. parextimum* Liebherr n. sp. *A. texanum* LeConte *A. extensicolle* Say *A. decorum* Say *A. elongatulum* Dejean Analyses of infraspecific geographic variation show 1 *A. texanum* is biometrically uniform over the center of its range whereas individuals from outlying populations deviate in several measurements 2 *A. extensicolle* is a variable species with clinal changes in biometry and color occurring across its range 3 *A. decorum* is polymorphic for color and setation and clinally variable in biometric characters Across the group flight apparatus development is inversely correlated with the amount of genetic heterogeneity measured by starch gel electrophoresis Electrophoretic qualitative morphological and biometric data are used to estimate phylogenetic relationships in the *A. extensicolle* group The electrophoretic and morphological data produce compatible estimates of phylogeny The biometric data are incompatible with the other data and are judged less useful for estimation of affinities Distributional data are utilized in conjunction with the proposed phylogeny to investigate speciation events in the group The principal mechanism is allopatric speciation brought about by vicariance across the lowlands of southeastern Arizona the Cochise filter barrier A second pattern involves a peripheral isolate of Antillean stock diverging on the Florida peninsula A third speciation event involves a habitat shift in which a lowland desert form produced a species which now inhabits the pine oak zone in the Sierra Madre Occidental The area taxon relationships are compared with those in other groups Based on an electrophoretic clock calibrated using data from *Drosophila* the timing of the initial speciation event in the group is estimated at 6.12 million years b. p. Other speciation events occurred throughout the Pliocene and Pleistocene with the most recent divergence of *A. decorum* and *A. elongatulum* estimated at less than two million years b. p.

Revision of the Genus *Enallagma* of the United States West of the Rocky Mountains and Identification of Certain Larvae by Discriminant Analysis (*Odonata:Coenagrionidae*) Rosser W. Garrison, 1984 The Development and Evolution of Butterfly Wing Patterns H.

Frederik Nijhout, 1991-08-17 Integrating the results of comparative morphology experiments on pattern development the genetics of color patterns and theoretical modeling of pattern formation Nijhout shows that the enormous diversity of natural patterns arises largely from quantitative variations in a small set of readily understandable generating rules **Chemical**

Mediation of Coevolution Kevin C. Spencer, 2013-10-22 *Chemical Mediation of Coevolution* explores the degree to which chemicals are the currency of information exchange in coevolved systems it also reexamines existing concepts of coevolution through interpretation of chemical parameters The contents of this volume are based on the Chemical Mediation of Coevolution symposium held on 14-15 August 1985 as part of the 36th annual AIBS meeting at the University of Florida The volume contains 18 chapters majority of which address plant chemical insect systems Explorations are also made into mammalian systems and into insect mimicry as that process derives ultimately from herbivory upon plants The data thus presented will specifically address chemistry as a factor in the establishment and maintenance of coevolution and test

coevolutionary concepts for their pertinence to chemically mediated systems It is hoped that this collected work will provide an impetus for careful reconsideration of the possible roles played by chemistry in the establishment maintenance and fate of coevolutionary relationships
