Data Mining and Reverse Engineering Stefano Spaccapietra, Fred Maryanski, 2013-03-14 Searching for Semantics Data Mining Reverse Engineering Stefano Spaccapietra Fred Maryanski Swiss Federal Institute of Technology University of Connecticut Lausanne Switzerland Storrs CT USA REVIEW AND FUTURE DIRECTIONS In the last few years database semantics research has turned sharply from a highly theoretical domain to one with more focus on practical aspects The DS 7 Working Conference held in October 1997 in Leysin Switzerland demonstrated the more pragmatic orientation of the current generation of leading researchers The papers presented at the meeting emphasized the two major areas the discovery of semantics and semantic data modeling The work in the latter category indicates that although object oriented database management systems have emerged as commercially viable products many fundamental modeling issues require further investigation Today's object oriented systems provide the capability to describe complex objects and include techniques for mapping from a relational database to objects However we must further explore the expression of information regarding the dimensions of time and space Semantic models possess the richness to describe systems containing spatial and temporal data The challenge of incorporating these features in a manner that promotes efficient manipulation by the subject specialist still requires extensive development

Graph Transformations and Model-Driven Engineering Gregor Engels, Claus Lewerentz, Wilhelm Schäfer, Andy Schürr, Bernhard Westfechtel, 2010-11-22 This festschrift volume published in honor of Manfred Nagl on the occasion of his 65th birthday contains 30 refereed contributions that cover graph transformations software architectures and reengineering embedded systems engineering and more

User-Centred

Requirements for Software Engineering Environments David J. Gilmore, Russel L. Winder, Francoise

Detienne, 2013-06-29 The idea for this workshop originated when I came across and read Martin Zelkowitz's book on Requirements for Software Engineering Environments the proceedings of a small workshop held at the University of Maryland in 1986 Although stimulated by the book I was also disappointed in that it didn't adequately address two important questions Whose requirements are these and Will the environment which meets all these requirements be usable by software engineers And thus was the decision made to organise this workshop which would explicitly address these two questions As time went by setting things up it became clear that our workshop would happen more than five years after the Maryland workshop and thus at the same time as addressing the two questions above this workshop would attempt to update the Zelkowitz approach Hence the workshop acquired two halves one dominated by discussion of what we already know about usability problems in software engineering and the other by discussion of existing solutions technical and otherwise to these problems This scheme also provided a good format for bringing together those in the HeI community concerned with the human factors of software engineering and those building tools to solve acknowledged but rarely understood problems

Innovations and Advances in Computer Sciences and Engineering Tarek Sobh, 2010-03-10 Innovations and Advances in Computer Sciences and Engineering includes a set of rigorously reviewed world class manuscripts addressing and detailing state of the art research projects in the areas of Computer Science Software Engineering Computer Engineering and Systems Engineering and Sciences Innovations and Advances in Computer Sciences and Engineering includes selected papers from the conference proceedings of the International Conference on Systems Computing Sciences and Software Engineering SCSS 2008 which was part of the International Joint Conferences on Computer Information and Systems Sciences and Engineering CISSE 2008

Successful Evolution of Software Systems Hongji Yang, Dr. Martin Ward, 2003 Annotation Explores the feasibility of using techniques such as program transformation and program abstraction to re engineer and extend the life of an existing IT system The authors De Montfort University outline a program transformation based evolution workbench called FermaT the architecture of the wide spectrum language WSL and a process for evolving object oriented real time and parallel systems The final chapter presents six case studies that use FermaT and re engineering assistant tools to evolve from source code to specifications or to new source code in a different language Annotation copyrighted by Book News Inc
