*Autonomous Robot Vehicles* Ingemar J. Cox, Gordon T. Wilfong, 2012-12-06 Autonomous robot vehicles are vehicles capable of intelligent motion and action without requiring either a guide or teleoperator control The recent surge of interest in this subject will grow even grow further as their potential applications increase Autonomous vehicles are currently being studied for use as reconnaissance exploratory vehicles for planetary exploration undersea land and air environments remote repair and maintenance material handling systems for offices and factories and even intelligent wheelchairs for the disabled This reference is the first to deal directly with the unique and fundamental problems and recent progress associated with autonomous vehicles The editors have assembled and combined significant material from a multitude of sources and in effect now conveniently provide a coherent organization to a previously scattered and ill defined field      **Mechanics of**

**Inertial Coordinate System on the Sky** J.H. Lieske, Victor K. Abalakin, 2012-12-06 IA U Symposium Number 141 Inertial Coordinate System on the Sky was held in Leningrad USSR from 17 21 October 1989 The symposium also commemorated the 150th anniversary of the founding of Pulkovo Observatory The scientific program was presented in ten half day sessions Most sessions were held at the Pulkovskaya Hotel but one session which highlighted Pulkovo s current programs was held at Pulkovo Observatory The sessions were organized into general categories pertaining to the legacy of Pulkovo for inertial systems current programs at Pulkovo Observatory concepts definitions and models and the realization and comparison of reference frames More than 140 scientific papers were presented either orally or in poster form Extensive use was made of electronic mail and computer readable communications and more than two thirds of the authors made use of the opportunity to submit papers for formatting by the editors The meeting was truly a symposium in the Greek sense of the word a free flowing exchange of ideas and opinions The final two papers presented at the symposium by Wilkins and by Westerhout are presented at an early stage in the published proceedings in order to help focus the reader s attention on the concepts and problems explored in subsequent papers As pointed out by G      **Multi-View Geometry Based Visual Perception and Control of Robotic Systems** Jian Chen, Bingxi Jia, Kaixiang Zhang, 2018-06-14 This book describes visual perception and control methods for robotic systems that need to interact with the environment Multiple view geometry is utilized to extract low dimensional geometric information from abundant and high dimensional image information making it convenient to develop general solutions for robot perception and control tasks In this book multiple view geometry is used for geometric modeling and scaled pose estimation Then Lyapunov methods are applied to design stabilizing control laws in the presence of model uncertainties and multiple constraints      *Rigid Body Kinematics and C++ Code* Sergio

Pissanetzky,2005-04 Presented here is an integrated approach perhaps the first in its class of advanced Rigid Body Kinematics with the object oriented C code that implements the rigid body objects and brings them to life Thinking in terms of objects is the natural way of thinking The concept of object has existed in Science for centuries More recently objects were introduced in Computation and object oriented programming languages were created Yet the concept of object is not routinely used when teaching Science and the idea that objects can come alive in a computer has not yet been fully exploited This book is Volume 2 of the multi volume series Articulated Robot Mechanics and C Code Volume 1 is Vectors Matrices and C Code published in 2004 Volumes to be published are Articulated Robot Dynamics and C Code and Articulated Robot Control and C Code More volumes may be added in the future This book integrates advanced rigid body Kinematics with object oriented concepts and the actual code implementing them It is both a textbook and a software release complete with software documentation and the mathematical background that supports the code The source code is included by download and readers can use it for their own programming The reader will need a basic knowledge of Physics particularly Mechanics and Algebra and Trigonometry Familiarity with C is not required because a course on C is included in Volume 1 You should read this book if you are a developer who needs an advanced background in rigid body Kinematics a student of Physics or Engineering who needs to learn C a scientist who needs to write advanced code but can t waste time developing the basics or you just need ready to use C source code for your project      **Interpreting Motion** Inderjeet Mani,James

Pustejovsky,2012-02-16 Interpreting Motion presents an integrated perspective on how language structures constrain concepts of motion and how the world shapes the way motion is linguistically expressed Natural language allows for efficient communication of elaborate descriptions of movement without requiring a precise specification of the motion Interpreting Motion is the first book to analyze the semantics of motion expressions in terms of the formalisms of qualitative spatial reasoning It shows how motion descriptions in language are mapped to trajectories of moving entities based on qualitative spatio temporal relationships The authors provide an extensive discussion of prior research on spatial prepositions and motion verbs devoting chapters to the compositional semantics of motion sentences the formal representations needed for computers to reason qualitatively about time space and motion and the methodology for annotating corpora with linguistic information in order to train computer programs to reproduce the annotation The applications they illustrate include route navigation the mapping of travel narratives question answering image and video tagging and graphical rendering of scenes from textual descriptions The book is written accessibly for a broad scientific audience of linguists cognitive scientists computer scientists and those working in fields such as artificial intelligence and geographic information systems

**Lyapunov-Based Control of Robotic Systems** Aman Behal,Warren Dixon,Darren M. Dawson,Bin Xian,2009-12-17  
Lyapunov Based Control of Robotic Systems describes nonlinear control design solutions for problems that arise from robots required to interact with and manipulate their environments Since most practical scenarios require the design of nonlinear

controllers to work around uncertainty and measurement related issues the authors use Lyapunov's direct method as an effective tool to design and analyze controllers for robotic systems After describing the evolution of real time control design systems and the associated operating environments and hardware platforms the book presents a host of standard control design tools for robotic systems using a common Lyapunov based framework It then discusses several problems in visual servoing control including the design of homography based visual servo control methods and the classic structure from motion problem The book also deals with the issues of path planning and control for manipulator arms and wheeled mobile robots With a focus on the emerging research area of human machine interaction the final chapter illustrates the design of control schemes based on passivity such that the machine is a net energy sink Including much of the authors own research work in controls and robotics this book facilitates an understanding of the application of Lyapunov based control design techniques to up and coming problems in robotics

**Proceedings of 8th GACM Colloquium on Computational Mechanics** Tobias Gleim, Stephan Lange, 2019-09-04 This conference book contains papers presented at the 8th GACM Colloquium on Computational Mechanics for Young Scientists from Academia and Industry The conference was held from August 28th 30th 2019 in Kassel hosted by the Institute of Mechanics and Dynamics of the department for civil and environmental engineering and by the chair of Engineering Mechanics Continuum Mechanics of the department for mechanical engineering of the University of Kassel The aim of the conference is to bring together young scientists who are engaged in academic and industrial research on Computational Mechanics and Computer Methods in Applied Sciences It provides a platform to present and discuss recent results from research efforts and industrial applications In more than 150 presentations given by young scientists current scientific developments and advances in engineering practice in this field are presented and discussed The contributions of the young researchers are supplemented by a poster session and plenary talks from four senior scientists from academia and industry as well as from the GACM Best PhD Award winners 2017 and 2018
