Reflection Seismology A Global Perspective Geodynamics Series Volume 13:

The German Continental Deep Drilling Program (KTB) Rolf Emmermann, Jürgen Wohlenberg, 2013-04-17 In October 1986 the German Minister for Research and Technology Bundesminister für Forschung und Technologie Dr H Riesenhuber officially announced that the super deep borehole of the Continental Deep Drilling Program of the Federal Republic of Germany KTB would be drilled in the Oberpfalz area of Northern Bavaria The site selection was based on a recommendation from the Deutsche Forschungsgemeinschaft DFG made after an evaluation by the Project Management of the technical and financial risks involved This decision was preceded by a conference held from September 19 to 21 1986 in Seeheim Odenwald at which the results of the site studies in the Oberpfalz and the Schwarzwald were presented and thoroughly debated The models and scientific targets resulting from these investigations formed the basis for a vote by the DFG Senate Commission for Geoscientific Interdisciplinary Research which was taken immediately after the conference After evaluation of all scientific and technical aspects the members of the commission voted almost unanimously for the Oberpfalz site It was however strongly emphasized that both locations had a wealth of attractive research objectives and that despite clear cut differences in some major aspects scientifically the two could be regarded as more or less equivalent Both locations would be excellent sites for research drilling and would certainly contribute to the understanding of the continental crust

Seismic Exploration of the Deep Continental Crust Dirk Gajewski, Wolfgang Rabbel, 2012-12-06 DEKORP the German continental reflection seismic program was the major focus of deep seismic research in Germany in the 1980s and 1990s The seismic sections provided fundamental new insight into deep geological structure of the European continent and the dynamics of continental formation They formed the basis for worldwide comparative studies of orogenic structure The complicated signature of the reflections from the deep crust indicated that new processing and interpretation techniques must be considered to better image the crystalline crust Results of these efforts including pre stack migration 3 D imaging shear waves and seismic anisotropy are presented in this special volume In part the articles open the perspective to new and future research In part they document research activity triggered by technical and interpretational questions raised by DEKORP field work and profiling results Many of the presented methods can find immediate application in industrial seismic prospecting

The History of Geophysics in Southern Africa Johan H de Beer, 2016-01-25 Geophysics is a comparatively young science which only evolved as a distinct discipline during the 19th century However its phenomena like earthquakes tsunamis volcanic eruptions and lightning had been objects of fear curiosity and speculation since ancient times In this book Johan de Beer and his research team reveal that geophysical activity in South Africa can be traced back to as early as 1488 This is a truly astonishing revelation which deserves to be firmly entrenched as part of the country's proud history The book also discusses the history and formation of South African geophysical institutions that made a huge and seldom acknowledged contribution to the technological development of southern Africa

Super-Deep Continental Drilling and Deep Geophysical Sounding Karl Fuchs, Yevgeny A. Kozlovsky, Anatoly I. Krivtsov, Mark D. Zoback, 2012-12-06

The articles in this volume were selected from a series of reports delivered in the Soviet Union at Yaroslavl during the International Seminar Super deep drilling and deep geophysical research which was organized and held in August 1988 by the Ministry of Geology of the USSR jointly with the
