,1854 **Pattern Analysis** H. Niemann,2012-12-06 This book is devoted to pattern analysis that is the automatic construc
tion of a symbolic description for a complex pattern like an image or con nected speech Pattern analysis thus tries to simulate
certain capabilities which go without saying in any human central nervous system The increasing interest and growing
efforts at solving the problems related with pattern analysis are motivated by the challenge of the problem and the expected
ap plications Potential applications are numerous and result from the fact that data can be gathered and stored by modern
devices in ever increasing extent thus making the finding of particular interesting facts or events in these hosts of data an
ever increasing problem It was tried to organize the book around one particular view of pattern analysis the view that pattern
analysis requires an appropriate set of modules operating on a common data base which contains interme processing diate
results of processing Although other views are certainly possible this one was adopted because the author feels that it is a
useful idea be cause the size of this book had to be kept within reasonable bounds and because it facilitated the composition
of fairly self contained chapters
