Rosalind Franklin The Dark Lady Of Dna:

Rosalind Franklin Brenda Maddox,2013-02-26 In 1962 Maurice Wilkins Francis Crick and James Watson received the Nobel Prize but it was Rosalind Franklin's data and photographs of DNA that led to their discovery Brenda Maddox tells a powerful story of a remarkably single minded forthright and tempestuous young woman who at the age of fifteen decided she was going to be a scientist but who was airbrushed out of the greatest scientific discovery of the twentieth century The Deeper Genome John Parrington,2015 Mapping the human genome proved to be just the beginning in understanding our genes what makes us human and how we can use the knowledge to cure inherited diseases John Parrington describes an emerging picture of our genome in 3D with many non gene players and environmental influences that is far more complex and subtle than we ever imagined *Gender and Genes* Klasien Horstman,Marli Huijter,2013 This Yearbook of Women's History Jaarboek voor Vrouwengeschiedenis is dedicated to Gender and Genes Intruding upon our everyday lives the world of DNA genes and genomics has become a challenging field of research both clinical and biomedical as well as socio cultural It is also a challenging topic for a Yearbook which traditionally focuses on women and gender from a historical point of view Gender issues are part and parcel of genes and genomics in scientific research and socio cultural discourses and representations Current literature on genes and genomics does not abound in analyses of biomedical and socio cultural realms where gender aspects are played out and exchanged This Yearbook may thus contribute to a field of analysis which contextualizes history from the viewpoint of current biotechnological developments This volume contains articles on medical cases reproductive testing and the case of the sex chromosomes and framing cancer risk in women and men cultural representations a portrait of female scientist Rosalind Franklin and interviews with feminist science philosophers Katarina Karkazis and Donna Dickenson Rosalind E Franklin , *Remembering Women Differently* Lynée Lewis Gaillet,Helen Gaillet Bailey,2019-05-23 An examination of women's work rhetorical agency and the construction of female reputation Before the full and honest tale of humanity can be told it will be necessary to uncover the hidden roles of women in it and recover their voices from the forces that have diminished their contributions or even at times deliberately eclipsed them The past half century has seen women rise to claim their equal portion of recognition and Remembering Women Differently addresses not only some of those neglected it examines why they were deliberately erased from history The contributors in this collection study the contributions of fourteen nearly forgotten women from around the globe working in fields that range from art to philosophy from teaching to social welfare from science to the military and how and why those individuals became either marginalized or discounted in a mostly patriarchal world These sterling contributors scholars from a variety of disciplines rhetoricians historians compositionists and literary critics employ feminist research methods in examining women's work rhetorical agency and the construction of female reputation By recovering these voices and remembering the women whose contributions have made our civilization better and more whole this work seeks to ensure that women's voices are

never silenced again

Learning About Your Genes: A Primer For Non-biologists Errol C Friedberg, 2018-09-20 Genes were unknowingly discovered in the 19th century by Gregor Mendel a Czechoslovakian monk It was later established that genes are made of DNA a biological compound found in tiny thread like structures called chromosomes that are located in the nuclei of all cells in our bodies DNA consists of chains of entities called bases of which there are four in nature DNA consists of long chains of bases sometimes referred to as DNA sequences that are joined in any order but the precise order and length of which constitute different genes Many but not all genes carry a code called the genetic code a code that instructs the synthesis manufacture of the many hundreds of proteins that we require to survive and execute the many functions of life The genetic code was

deciphered in relatively recent years and is considered one of the most significant discoveries in the history of biology. Genes that encode instructions for the synthesis of proteins and those that regulate the manufacture of proteins comprise a mere two percent of our DNA. Despite our extensive knowledge of biology and the sub discipline of molecular biology, the study of biology at the molecular level, the function of any of the rest of the DNA in our cells is unknown. Research about genes and DNA has in recent years spawned an endeavor referred to as the Human Genome Project, an international collaboration that has successfully determined, stored, and rendered publicly available the sequences of almost all the genetic content of the chromosomes of the human organism, otherwise known as the human genome. DNA sequences that are unique to every person on earth have been discovered, DNA fingerprints, and are now used for identifying criminals. The book relates a specific example of identifying a criminal who murdered two women. This is the first and only book that we are aware of that educates non biologists about genes. It is written in a style and uses a vocabulary that can be comprehended by the average reader who knows very little if anything about genes.

professionals and those starting a new technology business who need to know all the laws concerning their inventions and creations An Intercultural Approach to English Language Teaching John Corbett, 2003 Intercultural language education has redefined the modern languages agenda in Europe and North America Now intercultural learning is also beginning to impact on English Language Teaching This accessible book introduces teachers of EFL to intercultural language education by describing its history and theoretical principles and by giving examples of classroom tasks The Code Breaker -- Young Readers Edition Walter Isaacson, Sarah Durand, 2022-04-26 When Jennifer Doudna was a sixth grader in Hilo Hawaii she came home from school one afternoon and found a book that would spark her curiosity in science It was The Double Helix James Watson s account of how he and Francis Crick had discovered the structure of DNA the spiral staircase molecule that carries the genetic instruction code for all forms of life When the time came Doudna focused her studies on what seemed to take a backseat in biochemistry figuring out the structure of RNA a closely related molecule that enables the genetic instructions coded in DNA to express themselves Doudna s expertise led her and her collaborators to develop a revolutionary technique that could actually edit human genes Today gene editing technologies such as CRISPR are already being used to eliminate simple genetic defects that cause disorders such as Tay Sachs disease and sickle cell anemia For now however Doudna and her team are lining up against our most immediate threat the coronavirus and you have just been given a front row seat to that race Why Millions Died George H. Scherr, 2012 Why Millions Died reviews the painfully slow development of research by isolated investigators who believed that diseases could be caused by infectious organisms The brutally contentious and vivid arguments that raged between the proponents of the germ theory of disease and those who condemned it from both the scientific community and the pulpits delayed the implementation of vaccines and antimicrobial agents Such delays resulted in millions of deaths until the professional communities and the general public began to believe that certain health measures could protect against infection and reduce the enormous death tolls from disease Preeminent among these workers was an Italian scientist Agostino Bassi who articulated the germ theory of disease following twenty years of research Approximately thirty years later Pasteur repeated Bassi s research in order to gain prestige as the savior of the germ theory of disease Pasteur was also discovered to have committed fraud in claiming he had developed a vaccine for anthrax only to be exposed by the brilliant German microbiologist Robert Koch Stolen Science Ella Schwartz, 2021-08-31 A fresh approach to a timely topic Stolen Science is a fascinating compendium of stories of uncredited scientists and inventors throughout the ages Over the centuries women people from underrepresented communities and immigrants overcame prejudices and social obstacles to make remarkable discoveries in science but they weren t the ones to receive credit in history books People with more power money and prestige were remembered as the inventor of the telephone the scientists who decoded the structure of DNA and the doctor who discovered the cause of yellow fever This book aims to set the record straight and celebrate the nearly forgotten inventors and scientists who shaped our world today **Underneath**
