Rutherford And Physics At The Turn Of The Century:

Rutherford and Physics at the Turn of the Century Mario Bunge, William R. Shea, 1979 Physics and the Rise of Scientific Research in Canada Yves Gingras, 1991-03-01 The teaching of engineering and a change in liberal arts curricula both stimulated by industrial growth encouraged the creation of specialized courses in the sciences By the 1890s Gingras argues trained researchers had begun to appear in Canadian universities The technological demands of the First World War and the founding in 1916 of the National Research Council of Canada NRC accelerated the growth of scientific research The Transactions of the Royal Society of Canada could no longer publish everything submitted to it because of the disproportionately large number of research papers from the fields of science In response the NRC created the Canadian Journal of Research a journal specifically dedicated to the publication of scientific research By 1930 a stable national system of scientific research was in place in Canada Following the dramatic increase in the national importance of their disciplines scientists faced the problem of social identity Gingras demonstrates that in the case of physics this took the form of a conflict between those who promoted a professional orientation necessary to compete successfully with engineers in the labour market and those mainly in the universities who were concerned with problems of the discipline such as publication internal management and awards Physics and the Rise of Scientific Research in Canada is the first book to provide a general analysis of the origins of scientific research in Canadian universities Gingras proposes a sociological model of the formation of scientific disciplines distinguishing the profession from the discipline two notions often confused by historians and sociologists of science **Fin de Siècle and Its Legacy** Mikulas Teich, Roy Porter, 1990-12-13 For many years the term fin de siècle has been used to imply a state of decadence which was thought to have pervaded civilised European society in the years around 1900 This volume of essays which draw on a very wide range of disciplines argues that the period was in fact one of dramatic change essentially positive and forward looking in character This was the period of the rise of the giant corporation of mass production and mass consumption and of the development of the generation and distribution of electrical energy Novel social features such as mass politics mass media and mass sport involved the body of ordinary people and in the arts complex reactions to contemporary social reality were aroused and expressed This was also the period which gave birth to the study of quantum mechanics relativity physics mental processes and genetics This volume forms part of a sequence of collections of essays which began with The Enlightenment in National Context 1981 and has continued with Romanticism in National Context 1988 They bring together comparative national and interdisciplinary approaches to the history of great movements in the development of human thought and actions Physics and the Human Body Hiram Baddeley, 2008 Physics and the Human Body is about how we found out how our bodies and the world about us work It is the common history of the discovery of the laws of physics and the exploration of human body over more than two millennia Theories about what nature is what we are and how our bodies function have concerned natural philosophers and physicians

since the time of Hippocrates and Empedocles The purpose of this book is to give a coherent history of relevant theories and discoveries to show how physics and human biology are linked Since the Renaissance natural philosophers and physicians have collaborated and influenced one another Galileo and Santorini Borelli and Malpighi Isaac Newton and John Locke Marie Curie and Claudius Regaud Many theories and discoveries have been made by those who were both natural philosophers and physicians Empedocles Ibn Sina Gilbert Stensen Mayow Stahl Black Poiseuille Young Purkinje von Helmholtz Berzelius and Koch Two important themes recur in these stories of discovery The first is the close relationship between the physical and medical sciences The second is the inspirational nature of discovery and the power of inventive genius to formulate surprising theories of great explanatory and predictive power theories that have revolutionized our ways of looking at the natural world and ourselves These discoveries emphasize that the laws of physics govern the living human body as they do inanimate matter Physics goes on inside us as well as outside Yet for many people this unsurprising reality has been hard to accept because physics and medical biology have in the past been presented as entirely separate disciplines The physics of quantum electrodynamics helped to understand the role of DNA in human genetics The Human Genome Project completed in 2003 resulted from the discoveries of physicists as well as medical scientists and promises further insights into our nature Quantum and radiation physics have provided new technologies such as ultrasound nuclear medicine and computed tomography for non surgical exploration of the living body

The Solvay Councils and the Birth of Modern Physics

Pierre Marage, Grégoire Wallenborn, 2013-11-11 FOREWORD This book came about as a result of two events an exhibition on the Solvay Physics Councils held in Brussels in May 1995 and a conference on the same theme which took place at the Free University of Brussels ULB on May 10th 1995 A book was published in French in conjunction with the exhibition and much of the present publication is taken from that book In addition we have included some of the papers presented at the conference as we believe they add a further dimension to the history of the Councils The French term Conseil Solvay is usually translated into English as Solvay Conference or Congress We have elected to retain the particular connotations of the French word Conseil by translating it instead as Council The Councils were after all no ordinary conferences Only a limited number of participants was invited hand picked by a scientific committee who for five to six days took an active part in the sessions and the long discussions that followed Each day one or two physicists would present a paper on a subject that had been chosen by the committee to fit in with the overall theme of the Council The word Conseil expressly implies the gathering of an elite to engage in debate

Janus, 1980 *The Problem of the Color Line at the Turn of the Twentieth Century* W. E. B. Du Bois, 2014-12-03 Early essays from the sociologist displaying the beginnings of his views on politics society and Black Americans status in the United States This volume assembles essential essays some published only posthumously others obscure another only recently translated by W E B Du Bois from 1894 to early 1906 They show the first formulations of some of his most famous ideas namely the veil double consciousness and the problem of the color line Moreover the deep historical

sense of the formation of the modern world that informs Du Bois's thought and gave rise to his understanding of the problem of the color line is on display here. Indeed the essays constitute an essential companion to Du Bois's 1903 masterpiece *The Souls of Black Folk*. The collection is based on two editorial principles: presenting the essays in their entirety and in strict chronological order. Copious annotation affords both student and mature scholar an unprecedented grasp of the range and depth of Du Bois's everyday intellectual and scholarly reference. These essays commence at the moment of Du Bois's return to the United States from two years of graduate level study in Europe at the University of Berlin. At their center is the moment of Du Bois's first full self-reflexive formulation of a sense of vocation as a student and scholar in the pursuit of the human sciences in their still nascent disciplinary organization that is the institutionalization of a generalized sociology or general ethnology as they could be brought to bear on the study of the situation of the so-called Negro question in the United States in all of its multiply refracting dimensions. They close with Du Bois's realization that the commitments orienting his work and intellectual practice demanded that he move beyond the institutional frames for the practice of the human sciences. The ideas developed in these early essays remained the fundamental matrix for the ongoing development of Du Bois's thought. The essays gathered here will therefore serve as the essential reference for those seeking to understand the most profound registers of this major American thinker. A seminal contribution to the history of modern thought. Compiled and edited by the world's preeminent scholar of early Du Boisian thought, these texts represent his most generative period when Du Bois engaged every discipline, helped construct modern social science, employed critical inquiry as a weapon of antiracism and political liberation, and always set his sights on the entire world. We know this not by the essays alone but by Nahum Dimitri Chandler's brilliant original and quite riveting introduction. If you are coming to Du Bois for the first time or the 500th time, this book is a must-read. Robin D. G. Kelley, author of *Freedom Dreams: The Black Radical Imagination* **Intellectual**

Mastery of Nature. Theoretical Physics from Ohm to Einstein, Volume 2 Christa Jungnickel, Russell McCormmach, 1990-09-24. Winner of the 1987 Pfizer Award of the History of Science Society. A majestic study of a most important epoch of intellectual history. Brian Pippard, *Times Literary Supplement*. The authors' use of archival sources hitherto almost untouched gives their story a startling vividness. These volumes are among the finest works produced by historians of physics. Jed Z. Buchwald, *Isis*. The authors painstakingly reconstruct the minutiae of laboratory budgets, instrument collections, and student numbers; they disentangle the intrigues of faculty appointments and the professional values those appointments reflected; they explore collegial relationships among physicists and they document the unending campaign of scientists to wring further support for physics from often reluctant ministries. R. Steven Turner, *Science*. Superbly written and exhaustively researched. Peter Harman, *Nature*. New Technical Books New York Public Library, 1979 *Sif Physics Ol Tb* Wan Yong Loo, 2007
