Medrano,Rafael Hernández,2015-04-28 Demographic changes due to improved life expectancy and access to medical care
has increased the number of people aged 65 years and beyond This raises an important new challenge for healthcare
professionals Changes in organ functions homeostatic mechanisms and receptor responsiveness impair drug distribution

of medical regimens is much more challenging in the elderly than in younger adult patients Elderly patients are also more

owing to the number of drugs administered Polypharmacy and potentially inappropriate medication is a common finding in
the elderly healthcare and it is considered a public health issue related to morbidity mortality and health care resource use
Psychopharmacological Issues in Geriatrics can be regarded as a pharmacovigilance manual for elderly patients as it
presents recommendations for geriatric prescription with specific considerations The book also provides a comprehensive

anxiolytics hypnotics and mood stabilizers The book is intended as a handbook for general medical and nursing practitioners
