Narcissus Amy Lawrence,1991-07-23 Do women in classical Hollywood cinema ever truly speak for themselves In Echo and Narcissus Amy Lawrence examines eight classic films to show how women s speech is repeatedly constructed as a problem an affront to male authority This book expands feminist studies of the representation of women in film enabling us to see individual films in new ways and to ask new questions of other films Using Sadie Thompson 1928 Blackmail 1929 Rain 1932 The Spiral Staircase Sorry Wrong Number Notorious Sunset Boulevard 1950 and To Kill a Mockingbird 1962 Lawrence illustrates how women s voices are positioned within narratives that require their submission to patriarchal roles and how their attempts to speak provoke increasingly severe repression She also shows how women s natural ability to speak is interrupted made difficult or conditioned to a suffocating degree by sound technology itself Telephones phonographs voice overs and dubbing are foregrounded called upon to silence women and to restore the primacy of the image Unlike the usage of voice by feminist and literary critics to discuss broad issues of authorship and point of view in film studies the physical voice itself is a primary focus Echo and Narcissus shows how assumptions about the deficiencies of women s voices and speech are embedded in sound s history technology uses and marketing Moreover the construction of the woman s voice is inserted into the ideologically loaded cinematic and narrative conventions governing the representation of women in Hollywood film **Visual Database Systems 3** Stefano Spaccapietra,Ramesh Jain,2013-06-05 Both the way we look at data

through a DBMS and the nature of data we ask a DBMS to manage have drastically evolved over the last decade moving from text to images and to sound to a lesser extent Visual representations are used extensively within new user interfaces Powerful visual approaches are being experimented for data manipulation including the investigation of three dimensional display techniques Similarly sophisticated data visualization techniques are dramatically improving the understanding of the information extracted from a database On the other hand more and more applications use images as basic data or to enhance the quality and richness of data manipulation services Image management has opened a wide area of new research topics in image understanding and analysis The IFIP 2 6 Working Group on Databases strongly believes that a significant mutual enrichment is possible by confronting ideas concepts and techniques supporting the work of researcher and practitioners in the two areas of visual interfaces to DBMS and DBMS management of visual data For this reason IFIP 2 6 has launched a

series of conferences on Visual Database Systems The first one has been held in Tokyo 1989 VDB 2 was held in Budapest 1991 This conference is the third in the series As the preceding editions the conference addresses researchers and practitioners active or interested in user interfaces human computer communication knowledge representation and management image processing and understanding multimedia database techniques and computer vision
