Future Generation Grids Vladimir Getov, Domenico Laforenza, Alexander Reinefeld, 2006-10-12 The CoreGRID Network of Excellence NoE project began in September 2004 Two months later in November 2004 the first CoreGRID Integration Workshop was held within the framework of the prestigious international Dagstuhl seminars CoreGRID aims at strengthening and advancing long term research knowledge transfer and integration in the area of Grid and Peer to Peer technologies CoreGRID is a Network of Excellence a new type of project within the European 6th Framework Programme to ensure progressive evolution and durable integration of the European Grid research community To achieve this objective CoreGRID brings together a critical mass of we established researchers and doctoral students from forty two institutions that have constructed an ambitious joint programme of activities Although excellence is a goal to which CoreGRID is committed durable integration is our main concern It means that CoreGRID has to carry out activities to improve the effectiveness of

European research in Grid by coordinating and adapting the participants activities in Grid research to share resources such as Grid testbeds to encourage exchange of research staff and students and to ensure close collaboration and wide dissemination of its results to the international community Organising CoreGRID Integration Workshops is one of the activities that aims at identifying and promoting durable collaboration between partners involved in the network From Integrated Publication and Information Systems to Information and Knowledge Environments Matthias Hemmje, Claudia Niederee, Thomas Risse, 2005-01-27 This book constitutes a commemorative volume devoted to Erich J Neuhold on the occasion of his 65th birthday The 32 invited reviewed papers presented are written by students and colleagues of Erich Neuhold throughout all periods of his scientific career The papers are organized in the following topical sections Database management enabling information systems Semantic Web drivers for advanced information management Securing dynamic media content integration From digital libraries to intelligent knowledge environments Visualization key to external cognition in virtual information environments From human computer interaction to human artefact interaction Domains for virtual information and knowledge environments **From Traditional Fault Tolerance to Blockchain** Wenbing Zhao, 2021-04-28 This book covers the most essential techniques for designing and building dependable distributed systems from traditional fault tolerance to the blockchain technology Topics include checkpointing and logging recovery orientated computing replication distributed consensus Byzantine fault tolerance as well as blockchain This book intentionally includes traditional fault tolerance techniques so that readers can appreciate better the huge benefits brought by the blockchain technology and why it has been touted as a disruptive technology some even regard it at the same level of the Internet This book also expresses a grave concern on using traditional consensus algorithms in blockchain because with the limited scalability of such algorithms the primary benefits of using blockchain in the first place such as decentralization and immutability could be easily lost under cyberattacks **Building Dependable Distributed Systems** Wenbing Zhao, 2014-03-06 A one volume guide to the most essential techniques for designing and building dependable distributed systems Instead of covering a broad range of research works for each dependability strategy this useful reference focuses on only a selected few usually the most seminal works the most practical approaches or the first publication of each approach explaining each in depth usually with a comprehensive set of examples Each technique is dissected thoroughly enough so that readers who are not familiar with dependable distributed computing can actually grasp the technique after studying the book Building Dependable Distributed Systems consists of eight chapters The first introduces the basic concepts and terminology of dependable distributed computing and also provides an overview of the primary means of achieving dependability Checkpointing and logging mechanisms which are the most commonly used means of achieving limited degree of fault tolerance are described in the second chapter Works on recovery oriented computing focusing on the practical techniques that reduce the fault detection and recovery times for Internet based applications are covered in chapter three Chapter four outlines the replication

techniques for data and service fault tolerance This chapter also pays particular attention to optimistic replication and the CAP theorem Chapter five explains a few seminal works on group communication systems Chapter six introduces the distributed consensus problem and covers a number of Paxos family algorithms in depth The Byzantine generals problem and its latest solutions including the seminal Practical Byzantine Fault Tolerance PBFT algorithm and a number of its derivatives are introduced in chapter seven The final chapter details the latest research results surrounding application aware Byzantine fault tolerance which represents an important step forward in the practical use of Byzantine fault tolerance techniques
