Stories and tales of animated nature; or, A visit to the Zoological gardens, Regent's park James BISHOP (Miscellaneous Writer.), 1854 Nature Stories for Young Readers Florence Bass, 1896 **Stories and the Brain** Paul B. Armstrong, 2020-05-26 This book explains how the brain interacts with the social world and why stories matter How do our brains enable us to tell and follow stories And how do stories affect our minds In *Stories and the Brain* Paul B Armstrong analyzes the cognitive processes involved in constructing and exchanging stories exploring their role in the neurobiology of mental functioning Armstrong argues that the ways in which stories order events in time imitate actions and relate our experiences to others lives are correlated to cortical processes of temporal binding the circuit between action and perception and the mirroring operations underlying embodied

intersubjectivity He reveals how recent neuroscientific findings about how the brain works how it assembles neuronal syntheses without a central controller illuminate cognitive processes involving time action and self other relations that are central to narrative An extension of his previous book *How Literature Plays with the Brain* this new study applies Armstrong's analysis of the cognitive value of aesthetic harmony and dissonance to narrative Armstrong explains how narratives help the brain negotiate the neverending conflict between its need for pattern synthesis and constancy and its need for flexibility adaptability and openness to change The neuroscience of these interactions is part of the reason stories give shape to our lives even as our lives give rise to stories Taking up the age old question of what our ability to tell stories reveals about language and the mind this truly interdisciplinary project should be of interest to humanists and cognitive scientists alike
