(Jr.),1973 **Non-Equilibrium Reacting Gas Flows** Ekaterina Nagnibeda,Elena Kustova,2009-07-09 In the present
monograph we develop the kinetic theory of transport phenomena and relaxation processes in the flows of reacting gas
mixtures and discuss its applications to strongly non equilibrium conditions The main attention is focused on the influence of
non equilibrium kinetics on gas dynamics and transport properties Closed systems of fluid dynamic equations are derived
from the kinetic equations in different approaches We consider the most accurate approach taking into account the state to
state kinetics in a flow as well as simplified multi temperature and one temperature models based on quasi stationary
distributions Within these approaches we propose the algorithms for the calculation of the transport coefficients and rate
coefficients of chemical reactions and energy exchanges in non equilibrium flows the developed techniques are based on the
fundamental kinetic theory principles The theory is applied to the modeling of non equilibrium flows behind strong shock
waves in the boundary layer and in nozzles The comparison of the results obtained within the frame of different approaches
is presented the advantages of the new state to state kinetic model are discussed and the limits of validity for simplified
models are established The book can be interesting for scientists and graduate students working on physical gas dynamics
aerothermodynamics heat and mass transfer non equilibrium physical chemical kinetics and kinetic theory of gases

Nuclear Science Abstracts ,1975 **Surface wave driven molecular low pressure plasmas for general lighting**
Oeguen, Celal Mohan,2016-02-23 Nowadays compact fluorescent lamps are widely used in general lighting applications
However they still struggle with acceptance problems due to the hazardous mercury which serves as the radiant component
inside the lamp The presented work deals with the development of a mercury free electrodeless low pressure plasma based
on a molecular filling and driven by microwaves which may represent a viable alternative to the conventional CFLs **The**
Physics and Technology of Ion Sources Ian G. Brown,2006-03-06 The first edition of this title has become a well known
reference book on ion sources The field is evolving constantly and rapidly calling for a new up to date version of the book In
the second edition of this significant title editor Ian Brown himself an authority in the field compiles yet again articles written
by renowned experts covering various aspects of ion source physics and technology The book contains full chapters on the
plasma physics of ion sources ion beam formation beam transport computer modeling and treats many different specific
kinds of ion sources in sufficient detail to serve as a valuable reference text **Plasma Dynamics for Aerospace**
Engineering Joseph J. S. Shang,Sergey T. Surzhikov,2018-06-21 This valuable resource summarizes the past fifty years basic
research accomplishments in plasma dynamics for aerospace engineering presenting these results in a comprehensive
volume that will be an asset to any professional in the field It offers a comprehensive review of the foundation of plasma

dynamics while integrating the most recently developed modeling and simulation techniques with the theoretic physics including the state of the art numerical algorithms Several first ever demonstrations for innovations and incisive explanations for previously unexplained observations are included All the necessary formulations for technical evaluation to engineering applications are derived from the first principle by statistic and quantum mechanics and led to physics based computational simulations for practical applications The computer aided procedures directly engage the reader to duplicate findings that are nearly impossible by using ground based experimental facilities Plasma Dynamics for Aerospace Engineering will allow readers to reach an incisive understanding of plasma physics *Theory of Low-Temperature Plasma Physics* Shi

Nguyen-Kuok,2016-11-11 This book offers the reader an overview of the basic approaches to the theoretical description of low temperature plasmas covering numerical methods mathematical models and modeling techniques The main methods of calculating the cross sections of plasma particle interaction and the solution of the kinetic Boltzmann equation for determining the transport coefficients of the plasma are also presented The results of calculations of thermodynamic properties transport coefficients the equilibrium particle interaction cross sections and two temperature plasmas are also discussed Later chapters consider applications and the results of simulation and calculation of plasma parameters in induction and arc plasma torches are presented The complex physical processes in high frequency plasmas and arc plasmas the internal and external parameters of plasma torches near electrode processes heat transfer the flow of solid particles in plasmas and other phenomena are considered The book is intended for professionals involved in the theoretical study of low temperature plasmas and the design of plasma torches and will be useful for advanced students in related areas
