Rational Homotopy Type Wen-tsün Wu, 2006-11-14 This comprehensive monograph provides a self contained treatment of the theory of I measure or Sullivan s rational homotopy theory from a constructive point of view It centers on the notion of calculability which is due to the author himself as are the measure theoretical and constructive points of view in rational homotopy The I measure is shown to differ from other homology and homotopy measures in that it is calculable with respect to most of the important geometric constructions encountered in algebraic topology This approach provides a new method of treatment and leads to various new results In particular an axiomatic system of I measure is formulated quite different in spirit from the usual Eilenberg Steenrod axiomatic system for homology and giving at the same time an algorithmic method of computation of the I measure in concrete cases The book will be of interest to researchers in rational homotopy theory and will provide them with new ideas and lines of research to develop further

**Reviving Ancient Chinese Mathematics** Jiri Hudecek, 2014-07-25 Twentieth century China has been caught between a desire to increase its wealth and power in line with other advanced nations which by implication means copying their institutions practices and values whilst simultaneously seeking to preserve China s independence and historically formed identity Over time Chinese philosophers writers artists and politicians have all sought to reconcile these goals and this book shows how this search for a Chinese way penetrated even the most central least contested area of modernity science Reviving Ancient Chinese Mathematics is a study of the life of one of modern China s most admired scientific figures the mathematician Wu Wen Tsun Negotiating the conflict between progress and tradition he found a path that not only ensured his political and personal survival but which also brought him renown as a mathematician of international status who claimed that he stood outside the dominant western tradition of mathematics Wu Wen Tsun s story highlights crucial developments and contradictions in twentieth century China the significance of which extends far beyond the field of mathematics On one hand lies the appeal of radical scientific modernity mechanisation in all its forms and competitiveness within the international scientific community On the other is an anxiety to preserve national traditions and make them part of the modernisation project Moreover Wu s intellectual development also reflects the complex relationship between science and Maoist ideology because his turn to history was powered by his internalisation of certain aspects of Maoist ideology including its utilitarian philosophy of science This book traces how Wu managed to combine political success and international scientific eminence a story that has wider implications for a new century of increasing Chinese activity in the sciences As such it will be of great interest to students and scholars of Chinese history the history of science and the history and philosophy of mathematics

 of the theory of I measure or Sullivan s rational homotopy theory from a constructive point of view It centers on the notion of  
 calculability which is due to the author himself as are the measure theoretical and constructive points of view in rational  
 homotopy The I measure is shown to differ from other homology and homotopy measures in that it is calculable with respect  
 to most of the important geometric constructions encountered in algebraic topology This approach provides a new method of  
 treatment and leads to various new results In particular an axiomatic system of I measure is formulated quite different in  
 spirit from the usual Eilenberg Steenrod axiomatic system for homology and giving at the same time an algorithmic method  
 of computation of the I measure in concrete cases The book will be of interest to researchers in rational homotopy theory and  
 will provide them with new ideas and lines of research to develop further
