**Messiaen's Musical Techniques: The Composer's View and Beyond** Gareth Healey,2016-04-22 Despite Messiaen's position as one of the greatest technical innovators of the twentieth century his musical language has not been comprehensively defined and investigated The composer's 1944 theoretical study *The Technique of My Musical Language* expounds only its initial stages and while his posthumously published *Trait de rythme de couleur et d'ornithologie* contains detailed explanations of selected techniques in most cases the reader is left to define these more precisely by observing them in the context of Messiaen's analyses of his own works Technical processes are nevertheless in many cases the primary components of a work or movement For instance *Personnages* dominates *Joie du sang des toiles* from the *Turangala* symphony and in certain cases such as *Le change* from the *Vingt regards sur l'Enfant Jésus* the process asymmetric augmentation is the only structuring element present Given this reliance on idiosyncratic techniques clear comprehension of the music is impossible without a detailed knowledge of Messiaen's methods Gareth Healey charts their development and interconnections considers their relationship with formal structures and applies them in refined and extended form to works for which Messiaen himself left no published analysis

**Jacket Neuroscience and Art** Amy Ione,2024-08-27 This book is focused on how understanding ourselves as humans is incomplete without considering both biological and cultural aspects Using the neurocultural perspective the book explores how everything in the world is filtered back and forth through the brain and culture The thrust of the book therefore is to explore the power of art in creating a bridge between cultural and neuroscientific lines of inquiry Looking at both clinical and non clinical populations the text examines historical foundations distinguishes congenital developmental conditions from those that are acquired and emphasizes how the brain constructs our sensory experiences Several distinctive features separate this research from other publications First the book opens with a review of how the historical literature is still etched into the ideas we employ to explain elements across the interdisciplinary fields of art aesthetics our sensory experience psychology cognition and well being Second the research adopts a humanistic rather than a philosophical or social science perspective in demonstrating the value of coupling anatomy and physiology with the natural and social environment In this artists from all genres are incorporated Among them are Iris Murdoch Ludwig van Beethoven Leonardo da Vinci Cristoforo de Predis Rembrandt Federico Fellini Chuck Close and David Hockney Case studies demonstrate how neuroscientific research meshes with art individual and cultural variables in ways that range from health and well being to physiological decline and biological traumas These include a case study that examines how Oliver Sacks combined biology

and biography in his writings It also explores art projects in several genres inspired by his studies Another case study is on the role of film as a useful clinical tool Here the book also demonstrates that cinematic devices used by filmmakers intersect with perceptual and cognitive neuroscience A defining feature of the analysis is the integration of research on brain injuries with humanistic responses in film literature and the visual arts This section outlines the lack of consensus regarding the causes and treatment of shell shock in World War I before introducing how research and art now work with PTSD TBI Finally the book examines therapeutic cases of professional and non professional artists concluding with a discussion of synesthesia and the senses
