*Parity games, separations, and the modal  $\mu$ -calculus* Dittmann, Christoph,2017-03-08 The topics of this thesis are the modal calculus and parity games The modal calculus is a common logic for model checking in computer science The model checking problem of the modal calculus is polynomial time equivalent to solving parity games a 2 player game on labeled directed graphs We present the first FPT algorithms fixed parameter tractable for the model checking problem of the modal calculus on restricted classes of graphs specifically on classes of bounded Kelly width or bounded DAG width In this process we also prove a general decomposition theorem for the modal calculus and define a useful notion of type for this logic Then assuming a class of parity games has a polynomial time algorithm solving it we consider the problem of extending this algorithm to larger classes of parity games In particular we show that joining games pasting games or adding single vertices preserves polynomial time solvability It follows that parity games can be solved in polynomial time if their underlying undirected graph is a tournament a complete bipartite graph or a block graph In the last chapter we present the first non trivial formal proof about parity games We explain a formal proof of positional determinacy of parity games in the proof assistant Isabelle HOL Die Themen dieser Dissertation sind der modale Kalk l und Parit tsspiele Der modale Kalk l ist eine h ufig eingesetzte Logik im Bereich des Model Checkings in der Informatik Das Model Checking Problem des modalen Kalk ls ist polynomialzeit quivalent zum L sen von Parit tsspielen einem 2 Spielerspiel auf beschrifteten
