**Flash of the Cathode Rays** Per F Dahl, 1997-01-01 The electron is fundamental to almost all aspects of modern life controlling the behavior of atoms and how they bind together to form gases liquids and solids Flash of the Cathode Rays A History of J J Thomson s Electron presents the compelling story of the discovery of the electron and its role as the first subatomic particle in nature The book traces the evolution of the concept of electrical charge from the earliest glow discharge studies to the final cathode ray and oil drop experiments of J J Thomson and Robert Millikan It also provides an overview of the history of modern physics up to the advent of the old quantum theory around 1920 Consolidating scholarly material while incorporating new material discovered by the well respected author the book covers the continental and English race for the source of the cathode rays

culminating in Thomson's corpuscle in 1897. It explores the events leading to Millikan's unambiguous isolation of the electron and the simultaneous circumstances surrounding the birth of Ernest Rutherford's nuclear atom and the discovery of radioactivity in 1896. The author also focuses on the controversies over N rays, Becquerel's positive electron and the famous Ehrenhaft-Millikan dispute over subelectrons. Scholarly yet accessible to those with basic physics knowledge, this book should be of interest to historians of science, professional scientists and engineers, teachers and students of physics and general readers interested in the development of modern physics.

*The Genius of Erasmus Darwin* Christopher Upham, Murray Smith, Robert Arnott, 2005. The Genius of Erasmus Darwin provides insight into the full extent of Erasmus Darwin's exceptional intellect. He is shown to be a major creative thinker and innovator, one of the minds behind the late eighteenth-century industrial revolution and one of the first, if not the first, to perceive the living world including humans as part of a unified evolutionary scenario. The contributions here provide contextual understandings of Erasmus Darwin's thought as well as studies of particular works and accounts of the later reception of his writings. In this way, it is possible to see why the young Samuel Taylor Coleridge was moved to describe Darwin as the first literary character in Europe and the most original minded man. Erasmus Darwin, Charles Darwin's grandfather, was one of the leading intellectuals of eighteenth-century England. He was a man with an extraordinary range of interests and activities: he was a doctor, biologist, inventor, poet, linguist and botanist. He was also a founding member of the Lunar Society, an intellectual community that included such eminent men as James Watt and Josiah Wedgwood.
