**Reaching for the Moon** Roger D. Launius, 2019-06-25 Fifty years after the Moon landing a new history of the space race explores the lives of both Soviet and American engineers At the dawn of the space age technological breakthroughs in Earth orbit flight were both breathtaking feats of ingenuity and disturbances to a delicate global balance of power In this short book aerospace historian Roger D Launius concisely and engagingly explores the driving force of this era the race to the Moon Beginning with the launch of Sputnik 1 in October 1957 and closing with the end of the Apollo program in 1972 Launius examines how early space exploration blurred the lines between military and civilian activities and how key actions led to space firsts as well as crushing failures Launius places American and Soviet programs on equal footing following American aerospace engineers Wernher von Braun and Robert Gilruth their Soviet counterparts Sergei Korolev and Valentin Glushko and astronaut Buzz Aldrin and cosmonaut Alexei Leonov to highlight key actions that led to various successes failures and ultimately the American Moon landing

**Reaching for the Moon** Buzz Aldrin, 2005-05-24 I walked on the moon This is my journey But it didn't begin when I stepped on board Apollo 11 on July 1 1969 It began the day I was born Becoming an astronaut took more than education discipline and physical strength It took years of determination and believing that any goal is possible from riding a bike alone across the George Washington Bridge at age ten to making a footprint on the Moon I always knew the Moon was within my reach and that I was ready to be on the team that would achieve the first landing But it was still hard to believe when I took my first step onto the Moon's surface We all have our own dreams This is the story of how mine came true

Reaching for the Moon John Choi, 2020-07-15 During the 1950s America and the Soviet Union were locked in an intense political and military standoff called the Cold War Out of this competition came the greatest adventure of mankind to date humans left Earth and went into space changing history forever Through accessible yet engaging text captivating photographs and informative sidebars readers will learn about the first rockets launched during World War II and Russian cosmonaut Yuri Gagarin who was the first man in space Details of the long and dangerous trip when Neil Armstrong Edwin Buzz Aldrin and Michael Collins finally set foot on the moon will enrapture readers Students will explore how past successes and failures have led to present day accomplishments

We Are What We Remember Laura Mattoon D'Amore, Jeffrey Meriwether, 2013-01-16 Commemorative practices are revised and rebuilt based on the spirit of the time in which they are re-created Historians sometimes imagine that commemoration captures history but actually commemoration creates new narratives about history that allow people to interact with the past in a way that they find meaningful As our social values change race gender religion sexuality class our commemorations do too We Are What We Remember The American Past Through Commemoration analyzes current trends in the study of historical memory that are

particularly relevant to our own present our biases our politics our contextual moment and strive to name forgotten overlooked and denied pasts in traditional histories Race gender and sexuality for example raise questions about our most treasured myths where were the slaves at Jamestowne How do women or lesbians protect and preserve their own histories when no one else wants to write them Our current social climate allows us to question authority and especially the authoritative definitions of nation patriotism and heroism and belonging How do we uncommemorate things that were miscommemorated in the past How do we repair the damage done by past commemorations The chapters in this book contributed by eighteen emerging and established scholars examine these modern questions that entirely reimagine the landscape of commemoration as it has been practiced and studied before

**Distant Worlds** Peter Bond, 2010-01-08 This book recounts the epic saga of how we as human beings have come to understand the Solar System The story of our exploration of the heavens Peter Bond reminds us began thousands of years ago with the naked eye observations of the earliest scientists and philosophers Over the centuries as our knowledge and understanding inexorably broadened and deepened we faltered many times frequently labored under misconceptions and faced seemingly insurmountable obstacles to understanding Yet despite overwhelming obstacles a combination of determined observers brilliant thinkers courageous explorers scientists and engineers has brought us particularly over the last five decades into a second great age of human discovery At our present level of understanding some fifty years into the Space Age the sheer volume of images and other data being returned to us from space has only increased our appetite for more and more detailed information about the planets moons asteroids and comets of the Solar System Taking a much needed overview of how we now understand these distant worlds in our cosmic neighborhood Bond not only celebrates the extraordinary successes of planetary exploration but reaffirms an important truth For seekers of knowledge there will always be more to explore An astonishing saga of exploration In this much needed overview of where we stand today Peter Bond describes the achievements of the astronomers space scientists and engineers who have made the exploration of our Solar System possible A clearly written and compelling account of the Space Age the book includes Dramatic accounts of the daring resourcefulness and ferocious competitive zeal of renowned as well as almost forgotten space pioneers Clear explanations of the precursors to modern astronomy including how ancient natural philosophers and observers first took the measure of the heavens More than a hundred informative photographs maps simulated scenarios and

technical illustrations many of them in full color Information dense appendices on the physical properties of our Solar System as well as a comprehensive list of 50 years of Solar System missions Organized into twelve chapters focused on the objects of our exploration the individual planets our Moon the asteroids and comets Bond s text shows how the great human enterprise of space exploration may on occasion have faltered or wandered off the path but taken as a whole amounts to one of the great triumphs of human civilization     The First Men on the Moon Stephanie Sammartino McPherson,2009-01-01 Looks at the lives of Neil Armstrong Buzz Aldrin and Mike Collins the three men who flew the Apollo 11 mission to the moon
