pathways to explain all organic reactions using flow charts as decision maps energy surfaces as problem space maps and
correlation matrices to display all possible interactions The third edition features entirely new chapters on crosschecking
chemical reactions through good mechanistic thinking and solving spectral analysis problems using organic structure
elucidation strategies This edition also includes more biochemical reaction mechanism examples additional exercises with
answers expanded discussion of how general chemistry concepts can show that structure determines reactivity and new
appendix covering transition metal organometallics Emphasizing critical thinking rather than memorization to solve
mechanistic problems this popular textbook Features new and expanded material throughout including more flowcharts
correlation matrices energy surfaces and algorithms that illustrate key decision making processes Provides examples from
