Chemical Kinetics and Inorganic Reaction

Mechanisms Smiljko Asperger, 2011-06-27 The serious study of the reaction mechanisms of transition metal complexes began some five decades ago Work was initiated in the United States and Great Britain the pioneers of that era were in alphabetical order F Basolo R E Connick I O Edwards C S Garner G P Haight W C E Higginson E I King R G Pearson H Taube M I Tobe and R G Wilkins A larger community of research scientists then entered the field many of them students of those just mentioned Interest spread elsewhere as well principally to Asia Canada and Europe Before long the results of individual studies were being consolidated into models many of which traced their origins to the better established field of mechanistic organic chemistry For a time this sufficed but major revisions and new assignments of mechanism became necessary for both ligand substitution and oxidation reduction reactions Mechanistic inorganic chemistry thus took on a shape of its own This process has brought us to the present time Interests have expanded both to include new and more complex species e g metalloproteins and a wealth of new experimental techniques that have developed mechanisms in ever finer detail This is the story the author tells and in so doing he weaves in the identities of the investigators with the story he has to tell This makes an enjoyable as well as informative reading

The Art of Writing Reasonable Organic Reaction Mechanisms

Robert B. Grossman, 2007-07-31 Intended for students of intermediate organic chemistry this text shows how to write a reasonable mechanism for an organic chemical transformation The discussion is organized by types of mechanisms and the conditions under which the reaction is executed rather than by the overall reaction as is the case in most textbooks Each chapter discusses common mechanistic pathways and suggests practical tips for drawing them Worked problems are included in the discussion of each mechanism and common error alerts are scattered throughout the text to warn readers about pitfalls and misconceptions that bedevil students Each chapter is capped by a large problem set

Reaction Mechanisms in Carbon Dioxide Conversion Michele Aresta,Angela Dibenedetto,Eugenio

Quaranta,2015-11-07 This book provides an analysis of the reaction mechanisms relevant to a number of processes in which CO₂ is converted into valuable products Several different processes are considered that convert CO₂ either in specialty chemicals or in bulk products or fuels For each reaction the mechanism is discussed and the assessed steps besides the dark sites of the reaction pathway are highlighted From the insertion of CO₂ into E X bonds to the reduction of CO₂ to CO or other C₁ molecules or else to C₂ or C_n molecules the reactions are analysed in order to highlight the known and obscure reaction steps Besides well known reaction mechanisms and energy profiles several lesser known situations are discussed Advancing knowledge of the latter would help to develop efficient routes for the conversion of CO₂ into valuable products useful either in the chemical or in the energy industry The content of this book is quite different from other books reporting the use of CO₂ On account of its clear presentation Reaction Mechanisms in Carbon Dioxide Conversion targets in particular researchers teachers and PhD students
