Reactive Extraction:

Reactive Extraction Hans-Jörg Bart, 2013-04-17 This booklet is designed to bridge the gap between handbooks and technical literature and aims at graduate students or experienced readers Commercial flow sheeting simulation software is increasingly available and is used in the early steps of process design in industry As to this more sophisticated and precise models based on activities instead of concentrations should be used After an introductory chapter there is in Chapter 2 an intensive discussion of reactive phase equilibria of ionic and non ionic solutes based on chemical potentials Chapter 3 introduces to multicomponent diffusion and mass transfer However the main focus is on the reactive mass transfer on rigid and mobile surfaces where the interfacial reaction molecular diffusion and adsorption layers are decisive The respective extraction of zinc with a cation exchanger and of acetic acid with an anion exchanger is discussed as case studies Since adsorption layers and surfactants have a major impact on liquid liquid extraction efficiency the final chapter reviews several techniques which make use of polymeric species in an extractive process A short review is also given on extraction apparatus and the hydrodynamics hydraulic design droplet population balances of columns Much of the booklet is based on the PhD works of C Czapla 2000 G Modes 2000 H Klocker 1996 T Kronberger 1995 M Marters 2000 M Roos 2000 M Traving 2000 and B Wachter 1996 who I wish to thank for their fruitful contributions *Mass Transfer* A. P. SINHA, PARAMESWAR DE, 2012-05-09 This book introduces the fundamental principles of the mass transfer phenomenon and its diverse applications in process industry It covers the full spectrum of techniques for chemical separations and extraction Beginning with molecular diffusion in gases liquids and solids within a single phase the mechanism of inter phase mass transfer is explained with the help of several theories The separation operations are explained comprehensively in two distinct ways stage wise contact and continuous differential contact The primary design requirements of gas liquid equipment are discussed The book provides a detailed discussion on all individual gas liquid liquid liquid solid gas and solid liquid separation processes The students are also exposed to the underlying principles of the membrane based separation processes The book is replete with real applications of separation processes and equipment Problems are worked out in each chapter Besides problems with answers short questions multiple choice questions with answers are given at the end of each chapter The text is intended for a course on mass transfer transport and separation processes prescribed for the undergraduate and postgraduate students of chemical engineering *Separation Processes* Pradeep Kumar Mishra, Manoj Kumar Mondal, Pradeep Srivastava, 2009 Contributed articles presented at an International Conference on Separation Processes organized by Institute of Chemical Engineering Technology Institute of Technology Banaras Hindu University in 2009 Downstream Processing in Biotechnology Venko N. Beschkov, Dragomir Yankov, 2021-06-21 The current book gives an excellent insight into downstream processing technology and explains how to establish a successful strategy for an efficient recovery isolation and purification of biosynthetic products In addition to the overview of purification steps and unit

operations the authors provide practical information on capital and operating costs related to downstream processing

Integrated Reaction and Separation Operations Henner Schmidt-Traub, Andrzej Gorak, 2007-12-29 Economic needs as well as ecological demands are major driving forces in improving chemical processes and plants To meet these goals processes have to be intensified in order to get products of higher quality to increase yield by reducing or even suppressing by products and to minimise energy consumption A preferred principle for such intensifications is process tegration especially integration of reaction and separation operations Scientific research in this field has been boosted by certain extremely succe ful examples like the Eastman Kodak process for methyl acetate or the MTBE process which are milestones for this method In 2002 the German Research Foundation defined process integration as one of the major search topics for the next decade In 1998 the Department of Biochemical and

Chemical Engineering at the University of Dortmund decided to pool its activities for concerted efforts in process integration and to form a joint research cluster. Our interest was to find out the general challenges as well as obstacles of integrated processes and to work out methods for their design and valuation. Soon it became clear that theoretical work only cannot give reasonable answers.

Intensification of Biobased Processes Andrzej Górak, Andrzej Stankiewicz, 2018-06-18 In recent years bioprocessing has increased in popularity and importance however bioprocessing still poses various important technological, economic and environmental challenges such as product yields, excessive energy consumption for separations in highly watery systems, batch operation or the downstream processing bottlenecks in the production of biopharmaceutical products. Many of those challenges can be addressed by application of different process intensification technologies discussed in the present book. The first book dedicated entirely to this area, *Intensification of Biobased Processes*, provides a comprehensive overview of modern process intensification technologies used in bioprocessing. The book focusses on four different categories of biobased products: bio fuels and platform chemicals, cosmeceuticals, food products and polymers and advanced materials. It will cover various intensification aspects of the processes concerned including bio reactor intensification, intensification of separation, recovery and formulation operations and process integration. This is an invaluable source of information for researchers and industrialists working in chemical engineering, biotechnology and process engineering.

Bioprocess Engineering Shijie Liu, 2020-04-07 *Bioprocess Engineering: Kinetics, Sustainability and Reactor Design* Third Edition is a systematic and comprehensive textbook on bioprocess kinetics, molecular transformation, bioprocess systems, sustainability and reaction engineering. The book reviews the relevant fundamentals of chemical kinetics, batch and continuous reactors, biochemistry, microbiology, molecular biology, reaction engineering and bioprocess systems engineering, introducing key principles that enable bioprocess engineers to engage in the analysis, optimization, selection of cultivation methods, design and consistent control over molecular, biological and chemical transformations. The quantitative treatment of bioprocesses is the central theme in this text, however, more advanced techniques and applications are also covered. Includes biological molecules and chemical reaction basics, cell biology and genetic engineering. Describes kinetics and catalysis at molecular and cellular levels along with the principles of fermentation. Covers advanced topics and treatise in interactive enzyme and molecular regulations, also covering solid catalysis. Explores bioprocess kinetics, mass transfer effects, reactor analysis, control and design.
