Growing scarcity of freshwater worldwide brings to light the need for sound water resource modeling and policy analysis While a solid foundation has been established for many specific water management problems combining those methods and principles in a unified framework remains an ongoing challenge This Handbook aims to expand the scope of efficient water use to include allocation of sources and quantities across uses and time as well as integrating demand management with supply side substitutes Socially efficient water use does not generally coincide with private decisions in the real world however Examples of mechanisms designed to incentivize efficient behavior are drawn from agricultural water use municipal water regulation and externalities linked to water resources Water management is further complicated when information is costly and or imperfect Standard optimization frameworks are extended to allow for coordination costs games and cooperation and risk allocation When operating efficiently water markets are often viewed as a desirable means of allocation because a market price incentivizes users to move resources from low to high value activities However early attempts at water trading have run into many obstacles Case studies from the United States Australia Europe and Canada highlight the successes and remaining challenges of establishing efficient water markets      **Water Scarcity** Ernest A. Engelbert,Ann Foley Scheuring,2023-11-10 Agricultural production in the semi arid western United States is dependent on irrigation Population in the seventeen western states has been and is expected to continue increasing Groundwater levels are declining throughout the region with long term pumping and increased demands leading to greater pumping lifts and costs land subsidence and salt water intrusion into groundwater basins Construction and operation costs of future water development in these states will be great both in dollars and in economic and social effects Competition for the available water supply due to increased demands in both agricultural and non agricultural sectors continues to increase Although considerable attention has been given to some aspects of declining water supplies for irrigated agriculture in particular areas this is the first volume
