Resonant Lives Sixty Figures Of Consequence:

NASA Technical Paper ,1986 Predicted Effect of Dynamic Load on Pitting Fatigue Life for

Low-contact-ratio Spur Gears David G. Lewicki,1986 How dynamic load affects the surface pitting fatigue life of external spur gears was predicted by using NASA computer program TELSGE Parametric studies were performed over a range of various gear parameters modeling low contact ratio involute spur gears In general gear life predictions based on dynamic loads differed significantly from those based on static loads with the predictions being strongly influenced by the maximum dynamic load during contact Gear mesh operating speed strongly affected predicted dynamic load and life Meshes operating at a resonant speed or one half the resonant speed had significantly shorter lives Dynamic life factors for gear surface pitting fatigue were developed on the basis of the parametric studies In general meshes with higher contact ratios had higher dynamic life factors than meshes with lower contact ratios A design chart was developed for hand calculations of dynamic life factors Author [The Resonance Effect](#) Carolyn McMakin,2017-04-25 The Resonance Effect is both the author s story of her inspirational journey of having the courage to find her true calling and an account of the development of a remarkable newly rediscovered treatment frequency specific microcurrent FSM that takes advantage of the body s ability to respond to frequencies in order to heal a number of chronic conditions Carolyn McMakin a chiropractor specializing in fibromyalgia and myofascial pain describes her experience using a two channel microcurrent device that has achieved astounding results that have changed medicine and created new possibilities for suffering patients over the past twenty years Nerve pain fibromyalgia diabetic neuropathies muscle pain athletic performance injury repair joint pain low back pain neck pain kidney stone pain the kidney stones themselves liver disease diabetic wounds brain and spinal cord injuries PTSD depression shingles asthma ovarian cysts abdominal adhesions and scarring all respond to specific frequencies McMakin explains that results are predictable reproducible and teachable all without side effects offering hope and healing to millions of people McMakin tells the story of how thousands of patients with conditions that did not respond to other medical therapies recovered from pain and disability through the non invasive treatment that she developed For example asthma resolves with specific frequencies that remove inflammation allergy reaction and spasm from the bronchi One frequency combination eliminates shingles pain in minutes and stops the shingles attack with a single three hour treatment Since 2005 a series of frequencies has been used to treat hundreds of PTSD patients Post surgical patients use FSM to reduce pain prevent bruising and increase healing NFL NHL and Olympic athletes use it to heal injuries and improve performance McMakin includes case histories that illustrate the efficacy of the treatment and shares the specific frequencies that each condition requires so that patients direct their own treatments **Forthcoming Books** Rose Arny,1993 **Global Climate Change and Human Life** M. A. K. Khalil,2022-06-02 In our time the global population has become large enough to cause perceptible environmental changes all over the world With it a new science of global change has emerged mostly as a practical matter to

understand and manage the earth's habitability and create a sustainable environment for some time to come one which balances the benefits of technological and societal advances with their potential less desirable side effects. These concerns began with the depletion of the ozone layer and its possible adverse consequences on human health and have in recent decades shifted to climate change driven by ongoing global warming. Why are these global changes occurring? How will they affect our lives? If we find the effects undesirable, what should we do? This book will attempt to answer these questions. It will show how to accomplish the goal of managing our climate, what it will take, and when it needs to be done. Such a management process has to be dynamic, making it more complex and less didactic, requiring changes in strategy to achieve a longer term goal as our knowledge advances. *Global Climate Change and Human Life* is a comprehensive and cohesive look at the emerging field of global change science. Using models that take the theoretical or conceptual understanding and translate them into mathematical forms, the book lays out a holistic view of the science that develops and teaches the main principles, concepts, and conclusions. In the end, readers will be empowered to use science and the scientific method to decide how important and timely climate change is as a social issue and which solutions can succeed. Your Resonant Self Sarah Peyton, 2017-09-12 Practices for well-being based in neuroscience and geared toward kindness. Skills for people to learn to be with themselves in the healthiest way possible. When we experience trauma or need to find a way to protect ourselves from interpersonal hurt, we make unconscious contracts with ourselves such as "I will never let myself get treated that way again" or "I will never forgive myself for that." But these contracts often result in harmful behaviors like self-criticism, lack of trust, and procrastination. Until we recognize and free ourselves from these damaging contracts, we can never truly heal. *Your Resonant Self Workbook* From Self-sabotage to Self-care takes us through the world of relational neuroscience and using the lens of unconscious contracts explores how our brains, nervous systems, and bodies react to the brains, nervous systems, and bodies of others. Case studies, resonant language practice, questionnaires, meditations, and journaling provide readers with healing strategies for uncovering and rewriting these contracts. Following *Your Resonant Self*, this workbook provides the tools to turn inward with kindness, warmth, and curiosity and create opportunities for self-healing.

Living and Dying in the Contemporary World Veena Das, Clara Han, 2015-11-17 Taking a novel approach to the contradictory impulses of violence and care, illness and healing, this book radically shifts the way we think of the interrelations of institutions and experiences in a globalizing world. *Living and Dying in the Contemporary World* is not just another reader in medical anthropology but a true tour de force, a deep exploration of all that makes life unbearable and yet livable through the labor of ordinary people. This book comprises forty-four chapters by scholars whose ethnographic and historical work is conducted around the globe, including South Asia, East Asia, Latin America, Africa, the Middle East, Europe, and the United States. Bringing together the work of established scholars with the vibrant voices of younger scholars, *Living and Dying in the Contemporary World* will appeal to anthropologists, sociologists, health scientists, scholars of religion, and all

who are curious about how to relate to the rapidly changing institutions and experiences in an ever more connected world

The Chemistry of Contrast Agents in Medical Magnetic Resonance Imaging Andre S. Merbach, Lothar Helm, Éva Tóth, 2013-02-19 Magnetic Resonance Imaging MRI is one of the most important tools in clinical diagnostics and biomedical research The number of MRI scanners operating around the world is estimated to be approximately 20 000 and the development of contrast agents currently used in about a third of the 50 million clinical MRI examinations performed every year has largely contributed to this significant achievement This completely revised and extended second edition Includes new chapters on targeted responsive PARACEST and nanoparticle MRI contrast agents Covers the basic chemistries MR physics and the most important techniques used by chemists in the characterization of MRI agents from every angle from synthesis to safety considerations Is written for all of those involved in the development and application of contrast agents in MRI Presented in colour it provides readers with true representation and easy interpretation of the images A word from the Authors Twelve years after the first edition published we are convinced that the chemistry of MRI agents has a bright future By assembling all important information on the design principles and functioning of magnetic resonance imaging probes this book intends to be a useful tool for both experts and newcomers in the field We hope that it helps inspire further work in order to create more efficient and specific imaging probes that will allow materializing the dream of seeing even deeper and better inside the living organisms Reviews of the First Edition attempts for the first time to review the whole spectrum of involved chemical disciplines in this technique Journal of the American Chemical Society well balanced in its scope and attention to detail a valuable addition to the library of MR scientists NMR in Biomedicine **First Things**, 1992

Mössbauer Effect Data Index John Gehret Stevens, 2013-12-14 This year's issue is again exciting not only because People with common goals establish communities Usually in the natural sciences communities originate it lists the 1 00th excited resonance state but also be around fields because institutions conferences and cause it contains extensive new information and add 197 the literature are normally field oriented In exceptional interesting articles on Au by Louis Roberts 151 tional cases communities have a method as the com Eu by Chris Barton and Norman Greenwood and 129 mon bond for instance Mossbauer spectroscopy The I by Hendrick deWaard One innovation might be minimum requirement to be a Mossbauer woman or suggested for our irreproducible results we have the man seems to be the possession of a Mossbauer sys International Journal of Irreproducible Results how tem and the MEDI Every member of the Mössbauer ever there is no literature for our reproducible nega community must have realized our extremely fortunate tive results Sometimes nature's hidden tricks are un situation before we put a drive system into motion known to us and experiments with some isotopes are we know within minutes if similar work has been pub tried unsuccessfully again and again A chapter for lished somewhere in the world **Mechanistic Approaches to Interactions of Electric and Electromagnetic Fields with Living Systems** Martin Blank, E. Findl, 2013-11-11 Although there is general agreement that exogenous electric and electromagnetic fields

influence and modulate the properties of biological systems there is no consensus regarding the mechanisms by which such fields operate It is the purpose of this volume to bring together and examine critically the mechanistic models and concepts that have been proposed We have chosen to arrange the papers in terms of the level of biological organization emphasized by the contributors Some papers overlap categories but the progression from ions and membrane surfaces through macromolecules and the membrane matrix to integrated systems establishes a mechanistic chain of causality that links the basic interactions in the relatively well understood simple systems to the complex living systems where all effects occur simultaneously The backgrounds of the invited contributors include biochemistry biophysics cell biology electrical engineering electrochemistry electrophysiology medicine and physical chemistry As a result of this diversity the mechanistic models reflect the differing approaches used by these disciplines to explain the same phenomena Areas of agreement define the common ground while the areas of divergence provide opportunities for refining our ideas through further experimentation To facilitate the interaction between the different points of view the authors have clearly indicated those published observations that they are trying to explain i e the experiments that have been critical in their thinking This should establish a consensus regarding important observations In the discussion of theories The Problem of Human Life

Alexander Wilford Hall,1886 **Science Is Not A Quiet Life: Unravelling The Atomic Mechanism Of Haemoglobin** Max F Perutz,1998-01-15 Linus Pauling called haemoglobin the most interesting and important of molecules This important volume shows how X ray crystallography was used to determine its bewilderingly complex atomic structure and to unravel the stereochemical mechanisms of its respiratory functions It introduces isomorphous replacement with heavy atoms which led to the first protein structures haemoglobin and its simpler relative myoglobin Later papers deal with the stereochemistry of the cooperative effects of haemoglobin with the relationships between the structures and impaired functions of abnormal haemoglobin with species adaptation of haemoglobin and with its action as a drug receptor and as an oxygen sensor The final papers deal with amino acid repeats which act as polar zippers and their role in certain inherited neurodegenerative diseases
