Water, Peace, and War Brahma Chellaney, 2015-03-01 This
pioneering and authoritative study considers the profound impact of the growing global water crunch on international peace
and security as well as possible ways to mitigate the crisis Although water is essential to sustaining life and livelihoods
geostrategist Brahma Chellaney argues that it remains the world's most underappreciated and undervalued resource One
sobering fact is that the retail price of bottled water is already higher than the international spot price of crude oil But unlike
oil water has no substitute raising the specter of water becoming the next flashpoint for conflict Water war as a concept may
not mesh with the conventional construct of warfare especially for those who plan with tanks combat planes and attack
submarines as weapons Yet armies don't necessarily have to march to battle to seize or defend water resources Water wars
in a political diplomatic or economic sense are already being waged between riparian neighbors in many parts of the world
fueling cycles of bitter recrimination exacerbating water challenges and fostering mistrust that impedes broader regional
cooperation and integration The danger is that these water wars could escalate to armed conflict or further limit already
stretched food and energy production Writing in a direct nontechnical and engaging style Brahma Chellaney draws on a wide
range of research from scientific and policy fields to examine the different global linkages between water and peace Offering
a holistic picture and integrated solutions his book promises to become the recognized authority on the most precious natural
resource of this century and how we can secure humankind's water future
