Brody, 2006-03-16 Daughters are the main caregivers to elderly disabled parents most often in their middle years and are caught in the middle of multiple competing demands on their time and energy Dr Brody revisits this phenomenon in this updated edition of her groundbreaking work Last Rights Barbara Logue, 1993-01-01 Several recent trends demographic social and economic are increasing the incidence and public support of deliberate death among the old and sick The number of elderly people is at an all time high Medical technology can prolong the lives of these men and women but it cannot keep them independent free of pain or competent to manage their own affairs Never before have so many been so sick for so long Changes in the size and structure of the American family make long term home care almost impossible while exorbitant health costs and scarce resources limit the provision of high quality care by paid workers Researcher Barbara J Logue refers to any deliberate behavior that causes death as death control She points out that death control like birth control involves very serious and deeply personal decisions choices that ought to be made on the basis of reliable information with care and compassion without coercion She goes on to assert that like birth control death control should be performed legally and with the help of the medical community Without access to assisted deaths many frail old people are left to endure wretched deaths Some die slowly of neglect or malnutrition in nursing homes Others take their own lives sometimes by violent means while they can still act independently because they are afraid that no one will help them if they wait until they are very sick Some die alone fearful of implicating friends or relatives in their back alley euthanasia While some die too soon because they are poor uneducated or hard to manage others are overtreated and their deaths delayed because doctors and hospitals want to increase their income or fear prosecution if they help a patient die Barbara Logue describes these and many other hazards inherent in our present long term care system noting that all too often the system causes suffering instead of alleviating it After assessing the alternatives she urges that we must make compassionate death control as available as birth control We must regulate and monitor it like any other medical procedure taking steps to minimize the risks while maximizing the benefits **Dementia and Social Work Practice** Carole B.

Rural Caregiving in the United States Ronda C. Talley, Kathleen Chwalisz, Kathleen C. Buckwalter, 2011-09-15. Caregivers living in rural areas face daunting obstacles. In addition to the isolation and anxiety that many caregivers across the country experience, rural caregivers must also cope with limited access to uncoordinated resources and severe shortages of trained professionals. Although many research, policy, and practice upgrades have been made in response to caregivers' general concerns, the specific problems facing the rural caregiver have been less frequently addressed. Focusing on what is known as well as what is needed and zeroing in on major subgroups within this diverse population, *Rural Caregiving in the United States* replaces misconceptions of the nonurban experience with real-life issues, findings, and solutions. For example, this pioneering volume covers a broad range of issues unique to rural caregiving, including research, education, training, policy, and practice. It identifies specific needs related to education, training, and support for rural caregivers. Examines both the positive and negative effects of rural living on caregivers as well as patients. Discusses the importance of in-home care in lieu of scarcer forms of for-profit care, e.g., hospitals. Addresses not only discrepancies between rural and urban health care systems but racial and ethnic disparities within rural health care. Explores the advantages of using information technology to address rural health care limitations. *Rural Caregiving in the United States* offers uniquely knowledgeable perspectives to researchers, practitioners, and graduate students in the caregiving fields, including psychology, social work, nursing, gerontology, and geriatrics, medicine, public health, public policy, and educational policy.

Learn how to develop an effective Alzheimer's ministry. The *Guide to Ministering to Alzheimer's Patients and Their Families* examines the importance of spirituality in dealing with the everyday challenges of this mysterious disease. Not a how-to manual with step-by-step instructions or tried-and-true formulas, this unique book instead examines the essential elements of ministering to dementia patients based on the first-hand accounts of family members living through pain and uncertainty. The book explores the stages of Alzheimer's grief and guilt, available resources, and implications of spiritual care for patients and families. It is equally useful as a textbook for graduate and undergraduate work, a reference for study groups and seminars, and a primer for those with limited knowledge of the illness. Ministers sometimes neglect Alzheimer's patients and their families because they feel they don't know what to say or do, even though they want to be obedient and faithful servants in this specialized ministry. The *Guide to Ministering to Alzheimer's Patients and Their Families* communicates the thoughts, feelings, and needs of those affected by the disease to help ministers

New Directions in Understanding Dementia and Alzheimer's Disease Taher Zandi, Richard J. Ham, 2012-12-06

The management of Alzheimer's Disease and the related dementias is one of the major challenges to health care professionals and American society at large for the coming decade and the coming millennium. The rapid growth of the over eighty five population, the group which as recent studies have confirmed and as many of us clinicians have long suspected has an even higher prevalence than previously quoted of dementing disorders is the major cause of this. We are thus challenged by as Bernard Isaac used to call it the survival of the unfittest as well as the optimistic approach of bringing life to years as John F Kennedy said. The fact is that we as a society tend to confuse treatment and cure and prevention. As the proceedings of the conference which this book represents emphasize there is considerable work going on about the potential prevention of or at least the reduction of symptomatology in these illnesses by interventions genetically, chemically and so forth. However the more we find out the more complicated it becomes and the more heterogeneous Alzheimer's and the related disorders appear to be not only in their manifestations as clinicians have long recognized but also in the individual initiating and underlying processes. For these reasons absolute preventive techniques or the likelihood of an intervention which will reverse the process in a high proportion of patients do not appear to be just around the corner.
