Results of the Royal Society Joint Air-Sea Interaction Project (JASIN) Royal Society (Great Britain), Joint Air-Sea Interaction Project, 1983 A project to study the interaction of the atmospheric and oceanic boundary layers with the larger scale motions of the sea and the air was proposed in 1966 by the Royal Meteorological Society to the Royal Society as an appropriate U K contribution to the Global Atmospheric Research Project It was hoped that the project which became the Joint Air Sea Interaction Project JASIN would involve the intensive study for about a month of the coupled boundary layers over an area of the North Atlantic about 150 km across with use of buoys ships balloons and aircraft to observe the structure of the upper ocean and the lower atmosphere and their interaction with each other and with layer scale synoptic features This project gradually became international and after a series of preparatory field experiments led to a large cooperative experiment JASIN 1978 some of the results of which are described in this volume The papers were produced by groups of authors to summarize the observations and their analysis in the context of the large body of complementary observations made by other participants in the project Particular attention is paid to comparisons between the conventional observations and those obtained from the oceanographic satellite Seasat I *Results of the Royal Society Joint Air-Sea Interaction Project*

Atmosphere and Ocean The Atmosphere and Ocean is a fully revised and updated student friendly physical introduction to the atmosphere and ocean Now in its Third Edition the book continues to provide students with an accessible description of the atmosphere and ocean with emphasis on their physical properties and interdependence Clearly structured throughout the book demonstrates that the atmosphere and ocean are both subject to the influence of the Earth's rotation and therefore they have a common dynamical basis The author clearly demonstrates the fundamental differences between the two environments and provides the reader with a much better understanding of the atmosphere and the ocean and an appreciation of their close interactive relationship There have been many developments in the field over the past ten years and the latest edition of this highly successful textbook brings together new material on the ocean atmosphere system and climate the observed circulation of the atmosphere and ocean and radiation in the atmosphere and ocean Fully revised and updated Third Edition of student friendly physical introduction to the atmosphere and ocean Now includes new chapters on observed circulation of the atmosphere and ocean energy flows in the ocean atmosphere system modeling the ocean and atmosphere the ocean atmosphere system and climate Well structured and written in an authoritative yet accessible style suitable for 2nd and 3rd year students taking courses in meteorology oceanography and related Earth Sciences or as an introduction for graduate students Emphasis placed on physical properties and inter dependence of the ocean and climate **Results of the Royal**

Surface Waves and Fluxes G.L. Geernaert,W.J. Plant,2013-11-11 During the Conference on Air Sea Interaction in January 1986 it was suggested to me by David Larner of Reidel Press that it may be timely for an updated compendium of air sea interaction theory to be organized developed and published Many new results were emerging at the time i e results from the MARSEN MAS EX MILDEX and TOWARD field projects among others were in the process of being reported and or published Further a series of new experiments such as FASINEX and HEXOS were soon to be conducted in which new strides in our knowledge of air sea fluxes would be made During the year following the discussions with David Larner it became apparent that many of the advances in air sea interaction theory during the 1970s and 1980s were associated with sponsor investments in satellite oceanography and in particular remote sensing research Since ocean surface remote sensing e g scatterometry and SAR requires intimate knowledge of ocean surface dynamics advances in remote sensing capabilities required coordinated research in air sea fluxes wave state scattering theory sensor design and data exploitation using environmental models Based on this interplay of disciplines it was decided that this book be devoted to air sea interaction and remote sensing as multi disciplinary activities *The Atmospheric Boundary Layer* J. R. Garratt,1994-04-21 The book gives a comprehensive and lucid account of the science of the atmospheric boundary layer ABL There is an emphasis on the application of the ABL to numerical modelling of the climate The book comprises nine chapters several appendices data tables information sources physical constants and an extensive reference list Chapter 1 serves as an introduction with chapters 2 and 3 dealing with the development of mean and turbulence equations and the many scaling laws and theories that are the cornerstone of any serious ABL treatment Modelling of the ABL is crucially dependent for its realism on the surface boundary conditions and chapters 4 and 5 deal with aerodynamic and energy considerations with attention to both dry and wet land surfaces and sea The structure of the clear sky thermally stratified ABL is treated in chapter 6 including the convective and stable cases over homogeneous land the marine ABL and the internal boundary layer at the coastline Chapter 7 then extends the discussion to the cloudy ABL This is seen as particularly relevant since the extensive stratocumulus regions over the subtropical oceans and stratus regions over the Arctic are now identified as key players in the climate system Finally chapters 8 and 9 bring much of the book s material together in a discussion of appropriate ABL and surface parameterization schemes in general circulation models of the atmosphere that are being used for climate simulation
