Retail Geography Shuguang Wang, Paul Du, 2020-05-26 The retail sector is an integral part of a national economy. From the political economy perspective all consumer goods have surplus values locked up in them; the surplus values are not realized until the consumer goods are purchased by consumers through various distribution channels. As such retailing is the essential link between production and consumption. The success of a retail business depends on two general factors: the location of the retail outlet and management of the business. Both factors are equally important. If the business is located in the wrong place with the wrong customer base it will not generate expected sales. Similarly if the business is poorly managed and operated it will not perform well even if the location is right. Influenced by both traditional and new location theories, Retail Geography is conceptualized and organized using the retail planning process as the framework. The technical and methodological chapters help guide the reader with detailed descriptions of the techniques and are supported with practical examples to reflect the latest software development. Retail Geography provides a state of the art summary and will act as a core textbook for undergraduate and graduate students of economic geography interested in specializing in retail and business geography. The practical examples also make it a valuable handbook for practitioners in the field as well as students of retail management and commercial real estate management.

Retail Location Planning in an Era of Multi-Channel Growth Mark Birkin, Graham Clarke, Martin Clarke, 2017-03-27 The way in which products and services are delivered to consumers through branches and retail outlets or

more generally through a network of distribution channels remains fundamentally important for maintaining a competitive advantage for a very wide range of businesses This is true within domestic markets but especially so for increasingly global corporations as shareholder pressure for continued growth drives businesses into ever more widespread geographical markets Arguing that more complex markets demand more sophisticated spatial analysis this book discusses the application of location planning techniques to generate competitive advantage in a variety of business sectors in a changing retail environment The series of techniques are analysed from relatively straightforward branch scorecards to sophisticated applications of geographical information systems GIS spatial modelling and mathematical optimisation Also explored are the changing dynamics of the impact of more restrictive planning environments in many countries on how retailers find new locations for growth and respond to changing consumer needs and wants The book is essential reading for students and scholars alike working in geography economics business management planning finance and industry studies

A Century of British Geography Ron Johnston, Michael Williams, British Academy, 2003-09-11 These essays trace the evolution of British geography as an academic discipline during the last hundred years and stress how the study of the world we live in is fundamental to an understanding of its problems and concerns Never before has such an ambitious and wide ranging review been attempted and never before has it been done with so much knowledge and passion The principal themes covered in this volume are those of environment place and space and the applied geography of map making and planning The volume also addresses specific issues such as disease urbanization regional viability and ethics and social problems This lively and accessible work offers many insights into the minds and practices of today's geographers

Planning for Retail Development Clifford Guy, 2006-10-11 Written by a leading expert in the field this is the first thorough critical review of retail planning policy in Britain including Scotland and Wales It covers recent changes in government policy and guidance and examines retail policy within a broader economic and social context Planning for Retail Development explains key events and debates in the evolution of retail planning policy at central and local government levels since the 1960s and draws contrasts between the 1980s a period in which retail developers were encouraged by central government to expand away from town centres and the more recent emphasis on protection and promotion of town centres as the most appropriate location for new development The book develops a critical evaluation of past and present retail planning policies based upon analyses of retailers objectives and of typical consumer shopping behaviour Relationships between retail planning and wider societal concerns including sustainable development social inclusion and urban regeneration are also examined and analysed and

guidelines for future policy objectives and content are drawn
